Zull, 2023-07-03 Neuroscience tells us that the products of the mind thought emotions artistic creation are the result of the interactions of the biological brain with our senses and the physical world in short that thinking and learning are the products of a biological process This realization that learning actually alters the brain by changing the number and strength of synapses offers a powerful foundation for rethinking teaching practice and one's philosophy of teaching James Zull invites teachers in higher education or any other setting to accompany him in his exploration of what scientists can tell us about the brain and to discover how this knowledge can influence the practice of teaching He describes the brain in clear non technical language and an engaging conversational tone highlighting its functions and parts and how they interact and always relating them to the real world of the classroom and his own evolution as a teacher The Art of Changing the Brain is grounded in the practicalities and challenges of creating effective opportunities for deep and lasting learning and of dealing with students as unique learners *The Far Horizons of Time* H.
