Trauma Informatics Kimball I. Maull,Jeffrey S. Augenstein,2012-12-06 Information and the technology to rapidly transmit

analyze document and disperse this information are increasing arithmetically if not logarithmically. Arguably no discipline better exemplifies this trend than medicine. It can be further argued that care of the trauma patient is one of the better examples of informatics and the potential benefit to the health professionals who care for these patients. Maull and Augenstein have provided us with a primer on informatics and its use in trauma care. The subject matter is timely and covers the gamut of trauma care from prehospital to rehabilitation. Who will benefit from trauma informatics? A simple answer would be anyone who takes care of trauma patients. From a broader perspective, however, at least three examples illustrate how trauma informatics can be used today to exert a positive effect on patient outcome. The first example is care of combat casualties including battlefield resuscitation, evacuation, acute care, and ultimate return to the continental United States. Current technology is such that via global positioning satellite, a corpsman could transmit to a remote area the vital signs and pertinent physical findings of a combat casualty. Furthermore, the location of the corpsman and the casualty would be precisely known, and consultation and destination disposition would be possible. The injured person, when admitted to a combat support hospital, could be continuously monitored, and additional remote consultation obtained.

Reproduction in Transgender and Nonbinary Individuals Molly B. Moravek, Gene de Haan, 2023-02-01 There are approximately 1.4 million trans-identified individuals in the US alone, many of whom will undergo gender-affirming medical or surgical interventions to better align their appearance with their gender identity. Multiple major medical societies recommend fertility preservation counseling prior to starting any gender-affirming therapies, but data are limited on the reproductive effects of common

gender affirming hormone regimens The burden of fertility counseling falls to the hormone providers and surgeons that are encountering these patients many of whom will not have had adequate training or resources to provide evidence based recommendations and options Additionally many reproductive health care providers are not trained in how to care for gender minorities The purpose of this book is to be a reference for clinicians and researchers in the field of transgender medicine to provide up to date data and resources to properly counsel transgender and nonbinary patients about the reproductive consequences of gender affirming interventions and their options for family building and to educate providers about appropriate and culturally competent reproductive health care Effects of masculinizing and feminizing hormone therapy as well as the fertility preservation options available are discussed in detail for both adults and youth In addition to these medical considerations both psychosocial legal and ethical considerations are highlighted for a more well rounded presentation A final chapter describes how to create a welcome and accepting clinical environment Such a reference does not currently exist leading to the propagation of misinformation and encouraging patients to seek nonmedical sources such as social media for their information *Reproduction in Transgender and Nonbinary Individuals* fills in this gap as a timely text for reproductive endocrinologists surgeons and all clinical staff working with this population

The History of Medical Informatics in the United States Morris F. Collen, Marion J. Ball, 2015-10-08 This is a meticulously detailed chronological record of significant events in the history of medical informatics and their impact on direct patient care and clinical research offering a representative sampling of published contributions to the field The History of Medical Informatics in the United States has been restructured within this new edition reflecting the transformation medical informatics has undergone in the years since 1990 The systems that were once exclusively institutionally driven hospital multihospital and outpatient information systems are today joined by systems that are driven by clinical subspecialties nursing pathology clinical laboratory pharmacy imaging and more At the core is the person not the clinician not the institution whose health all these systems are designed to serve A group of world renowned authors have joined forces with Dr Marion Ball to bring Dr Collen s incredible work to press These recognized leaders in medical informatics many of whom are recipients of the Morris F Collen Award in Medical Informatics and were friends of or mentored by Dr Collen carefully reviewed editing and updating his draft chapters This has resulted in the most thorough history of the subject imaginable and also provides readers with a roadmap for the subject well into later in the century
