Rethinking Cancer Bernhard Strauss, Marta Bertolaso, Ingemar Ernberg, Mina J. Bissell, 2021-04-27 Leading scientists argue for a new paradigm for cancer research proposing a complex systems view of cancer supported by empirical evidence Current consensus in cancer research explains cancer as a disease caused by specific mutations in certain genes After dramatic advances in genome sequencing never before have we known so much about the individual cancer cell and yet never before has it been so unclear what to do with this knowledge In this volume leading researchers argue for a new theory framework for understanding and treating cancer The contributors propose a complex systems view of cancer presenting conceptual building blocks for a new research paradigm supported by empirical evidence The contributors first discuss the new research framework in terms of theoretical foundations and then take up the relevance of a systems approach reviewing such topics as nonlinearity recurrence after treatment the cellular attractor concept network theory and non coding DNA the dark matter of our genome They address the temporality of cancer progression drawing on evolutionary theory and clinical experience Finally they cover the dominant role of the tissue microenvironment in cancer analyzing topics including altered metabolic pathways the disease defining influence on metastasis and the interconnectedness of different environmental niches across levels of organization

The Book of Answers ,1987 **Hemo-Dynamics** Mair Zamir,2015-11-19 Praise for Hemo Dynamics This book provides an elegant and intuitive derivation of the fundamental mathematics underlying fluid flow and then applies these in a straightforward way to pulsatile blood flow in all its complexity One of the triumphs of the book is that Zamir succeeds in making essential concepts such as the Navier Stokes equations completely accessible to any reader with a knowledge of basic calculus The author succeeds in conveying both the beauty of his subject matter and his passion for the elegance and intricacies of fluid flow more generally Lindi Wahl PhD Professor of Applied Mathematics The University of Western Ontario Incredible the figures alone are to die for At first glance Hemo Dynamics seems like a deep engineering and modeling dive into the mechanical properties of the cardiovascular system blood and how they interact to generate flow and pressure However the text is laid out in a stepwise manner and I was especially impressed in the way that the key conceptual figures illustrate the essential concepts In keeping with the philosophical underpinnings of engineering Professor Zamir has also constructed his book so that the format text equations and the figures are self reinforcing This isa book that will be of great use to those who seek to understand the cardiovascular system from a mechanical and m odeling perspective Michael J Joyner MD Professor of Anesthesiology Mayo Clinic Rochester MN The Art of Modeling in Science and Engineering with Mathematica Diran Basmadjian,2019-07-17 Modeling is practiced in engineering and all physical sciences Many specialized texts exist written at a high level that cover this subject However students and even professionals often experience difficulties in setting up and solving even the simplest of models This can be attributed to three difficulties the proper choice of model the absence of precise solutions and the necessity to make suitable simplifying assumptions and approximations Overcoming these difficulties is the focus of The Art of Modeling in Science and Engineering The text is designed for

advanced undergraduate and graduate students and practicing professionals in the sciences and engineering with an interest in Modeling based on Mass Energy and Momentum or Force Balances The book covers a wide range of physical processes and phenomena drawn from chemical mechanical civil environmental sciences and bio sciences A separate section is devoted to real World industrial problems The author explains how to choose the simplest model obtain an appropriate solution to the problem and make simplifying assumptions approximations
