

Replace and secure the terminal block lid on the sounder with a #2 Phillips screwdriver.

NOTE: The sounder does not operate when the lid is removed.

Grounding the Sounder

The chassis ground post is located on the exterior of the chassis, adjacent to a corner mounting hole.

- 1 Connect the chassis ground post to the boat water ground circuit.

- 2 Mount the sounder ([Mounting the Sounder](#)) and connect the power, marine network, transducer, and sensors ([Connecting the Sounder](#)).

Installing Locking Rings on the Cables

Before you install locking rings on the cables, you must route the cables.

To help make the cable-routing process easier, the locking rings are packaged separately from the cables. Each locking ring is packaged in a small bag with a number on the label for easy identification.

- 1 Separate the two halves of the locking ring ①.

- 2 Align the two halves ② of the locking ring over the cable and snap them together.
- 3 Insert the o-ring ③ into the end of the connector.

Transducer Wiring Diagrams

NOTICE

Connecting the high-frequency wires to the low-frequency terminal block, or the low-frequency wires to the high-frequency terminal block, damages the device and the transducer.

You can use these diagrams to identify the connection points for your transducer wires on the GSD 26 terminal block. Locate your CHIRP/spread spectrum transducer model in the wiring

color tables ([Transducer Wire Color Tables](#)) for more information.

The outer shield wire must connect to one of the two screw posts below the terminal block using the included ring crimp terminal. When connecting two single-element transducers, you must connect the second transducer to the duplicate set of connections on the right side of the terminal block.

TIP: The primary transducer cable wire housing covers the wiring bundles. To identify the wiring groups in the bundles more easily, you can remove up to an inch of the cable housing.

Single-Element CHIRP/Spread Spectrum

Dual-Element CHIRP/Spread Spectrum with Temperature and XID

NOTE: The temperature and XID wires can be connected at either location.

Dual-Element CHIRP/Spread Spectrum with XID

NOTE: The XID wires can be connected at either location.

Dual-Element CHIRP/Spread Spectrum with Separate Temperature Sensor

NOTE: The temperature and XID wires can be connected at either location.

A High-Rate Virtual Instrument of Marine Vehicle Motions for Underwater Navigation and Ocean Remote Sensing Chrystel Gelin,2012-08-22

Dead Reckoning aided with Doppler velocity measurement has been the most common method for underwater navigation for small vehicles Unfortunately DR requires frequent position recalibrations and underwater vehicle navigation systems are limited to periodic position update when they surface Finally standard Global Positioning System GPS receivers are unable to provide the rate or precision required when used on a small vessel To overcome this a low cost high rate motion measurement system for an Unmanned Surface Vehicle USV with underwater and oceanographic purposes is proposed The proposed onboard system for the USV consists of an Inertial Measurement Unit IMU with accelerometers and rate gyros a GPS receiver a flux gate compass a roll and tilt sensor and an ADCP Interfacing all the sensors proved rather challenging because of their different characteristics The proposed data fusion technique integrates the sensors and develops an embeddable software package using real time data fusion methods for a USV to aid in navigation and control as well as controlling an onboard Acoustic Doppler Current Profiler ADCP While ADCPs non intrusively measure water flow the vessel motion needs to be removed to analyze the data and the system developed provides the motion measurements and processing to accomplish this task
