Shoemaker,Timothy Vos,2009-09-10 Gatekeeping Theory examines the process by which the billions of

messages that are available in today's media world get cut down and transformed into the hundreds of messages that reach a given person on a given day *Mathematical Perspectives on Neural Networks* Paul Smolensky, Michael C.

Mozer, 2013-05-13 Recent years have seen an explosion of new mathematical results on learning and processing in neural networks. This body of results rests on a breadth of mathematical background which even few specialists possess. In a format intermediate between a textbook and a collection of research articles, this book has been assembled to present a sample of these results and to fill in the necessary background in such areas as computability theory, computational complexity theory, the theory of analog computation, stochastic processes, dynamical systems, control theory, time series analysis, Bayesian analysis, regularization theory, information theory, computational learning theory, and mathematical statistics. Mathematical models of neural networks display an amazing richness and diversity. Neural networks can be formally modeled as computational systems, as physical or dynamical systems, and as statistical analyzers. Within each of these three broad perspectives, there are a number of particular approaches. For each of 16 particular mathematical perspectives on neural networks, the contributing authors provide introductions to the background mathematics and address questions such as: Exactly what mathematical systems are used to model neural networks from the given perspective? What formal questions about neural networks can then be addressed? What are typical results that can be obtained? and What are the outstanding open problems? A distinctive feature of this volume is that for each perspective presented in one of the contributed chapters, the first editor has provided a moderately detailed summary of the formal results and the requisite mathematical concepts. These summaries are presented in four chapters that tie together the 16 contributed chapters: three develop a coherent view of the three general perspectives—computational, dynamical, and statistical—the other assembles these three perspectives into a unified overview of the neural networks field. *Cultural Tourism Research Methods* Greg Richards, Wil Munsters, 2010

The consumption of culture is one of the most important aspects of tourism activity. Cultural tourism includes experiencing local culture, traditions, and lifestyle; participation in arts-related activities; and visits to museums, monuments, and heritage sites. This book reviews a wide range of qualitative and quantitative research methods applied to the field of cultural tourism, including surveys, mystery tourist visits, visitor tracking, grand tour narratives, collage, researcher-created video, photo-based interviews, ethnographic, and actor network approaches. It provides a practical guide on how to conduct research, as well as a discussion and evaluation of the methods. *The Routledge Reviewer's Guide to Mixed Methods Analysis* Anthony J.

Onwuegbuzie, R. Burke Johnson, 2021-07-12 The Routledge Reviewer's Guide to Mixed Methods Analysis is a groundbreaking edited book, the first devoted solely to mixed methods research analyses or mixed analyses. Each of the 30 seminal chapters, authored by internationally renowned scholars, provides a simple and practical introduction to a method of mixed analysis. Each chapter demonstrates how to conduct the analysis in easy-to-understand language. Many of the chapters present new topics that have never been written before, and all chapters offer cutting-edge approaches to analysis. The book contains the
