

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- [I] Circles are females and squares are males.
- [I] A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person I-1. Then answer the questions below the table.

What do you know about the genotype of the mother of II?

These parents (I-1 and a color-blind man (I-2)) had four children, but color-blind males from his mother. Since the mother is not shaded, she must be a carrier.

Number II-2 is colorblind, just like his father. Where could he get his allele for colorblindness?

Yes, he inherited his allele for colorblindness from his mother. Must have been that I-1 is a carrier. From their father.

Number numbers II-3 and II-4 were colorblind. How did they have a colorblind son (II-5)?

That mother must be a carrier for color blindness.

What must be the genotype of the parents of a colorblind daughter (III-4)?

To have a color-blind daughter, she must have the recessive allele from each parent. Her father must be X^bY and mother must have X^bX^b or X^bX .

If mother II-3 has a normal son, what is the probability that their son will be colorblind?

$X^bX \times XY \rightarrow$ all of their sons will have color-blindness.

(normal male)
