Geography Gis P2 2014:

GeoComputation, Second Edition Robert J. Abraham, Linda M. See, 2014-06-23 A revision of Openshaw and Abraham's seminal work GeoComputation Second Edition retains influences of its originators while also providing updated state of the art information on changes in the computational environment In keeping with the field's development this new edition takes a broader view and provides comprehensive coverage across the field of GeoComputation See What's New in the Second Edition Coverage of ubiquitous computing the GeoWeb reproducible research open access and agent based modelling Expanded chapter on Genetic Programming and a separate chapter developed on Evolutionary Algorithms Ten chapters updated by the same or new authors and eight new chapters added to reflect state of the art Each chapter is a stand alone entity that covers a particular topic You can simply dip in and out or read it from cover to cover The opening chapter by Stan Openshaw has been preserved with only a limited number of minor essential modifications having been enacted This is not just a matter of respect Openshaw's work is eloquent prophetic and his overall message remains largely unchanged In contrast to other books on this subject GeoComputation Second Edition supplies a state of the art review of all major areas in GeoComputation with chapters written especially for this book by invited specialists This approach helps develop and expand a computational culture one that can exploit the ever increasing richness of modern geographical and geospatial datasets It also supplies an instructional guide to be kept within easy reach for regular access and when need arises ICEL2015-10th International Conference on e-Learning Dr Carlton Watson, 2015-06-12 These proceedings represent the work of researchers participating in the 10th International Conference on e Learning ICEL 2015 which is being hosted this year by the College of the Bahamas Nassau on the 25-26 June 2015 ICEL is a recognised event on the International research conferences calendar and provides a valuable platform for individuals to present their research findings display their work in progress and discuss conceptual advances in the area of e Learning It provides an important opportunity for researchers and managers to come together with peers to share their experiences of using the varied and expanding range of e Learning available to them With an initial submission of 91 abstracts after the double blind peer review process there are 41 academic Research papers and 2 PhD papers Research papers published in these Conference Proceedings These papers come from some many different countries including Australia Belgium Brazil Canada China Germany Greece Hong Kong Malaysia Portugal Republic of Macedonia Romania Slovakia South Africa Sweden United Arab Emirates UK and the USA A selection of the best papers those agreed by a panel of reviewers and the editor will be published in a conference edition of EJEL the Electronic Journal of e Learning www.ejel.com These will be chosen for their quality of writing and relevance to the Journal's objective of publishing papers that offer new insights or practical help into the application e Learning Managing Natural Resource Conflicts with Participatory Mapping and PGIS Applications Peter A. Kwaku Kyem, 2021-08-04 This book integrates spatial analysis into the study and management of conflicts and offers a model in conflict studies that incorporates theoretical

explanations of conflict its causes and impacts with a geospatial strategy for intervening in disputes over allocation and use of natural resources connects theory and practice Alongside a theoretical analysis of resource conflicts and an account of Participatory Mapping and PGIS development this book provides a case study of GIS applications in conflict mediation The book also lays out a practical and straightforward demonstration of PGIS applications in conflict management using a real world case study and traces the Participatory Mapping and PGIS movements evolution compares PPGIS and PGIS practices and makes distinctions between traditional GIS applications and PGIS practice The approach embodies the enhanced use of spatial information and media sets of tools for analyzing mapping and displaying spatial data and a platform for participatory discussions that enhances consensus building The book therefore contributes to the search for novel approaches for managing current and emerging conflicts With this book resource managers development practitioners students and scholars of Participatory Mapping and PGIS applications and conflict studies will be equipped with the principles skills and the tools they need to manage non violent resource conflicts and keep the disputes from slipping into violence The book will also be a valuable text for basic and advanced studies in Participatory Mapping and PGIS applications Conflict Resolution and Conflict Management **GIS in Sustainable Urban Planning and Management** Martin van Maarseveen,Javier

Martinez,Johannes Flacke,2018-12-07 The Open Access version of this book available at <http://www.tandfebooks.com/doi/view/10.1201/9781315146638> has been made available under a Creative Commons Attribution Non Commercial No Derivatives 3.0 license GIS is used today to better understand and solve urban problems GIS in Sustainable Urban Planning and Management A Global Perspective explores and illustrates the capacity that geo information and GIS have to inform practitioners and other participants in the processes of the planning and management of urban regions The first part of the book addresses the concept of sustainable urban development its different frameworks the many ways of measuring sustainability and its value in the urban policy arena The second part discusses how urban planning can shape our cities examines various spatial configurations of cities the spread of activities and the demands placed on different functions to achieve strategic objective It further focuses on the recognition that urban dwellers are increasingly under threat from natural hazards and climate change Written by authors with expertise on the applications of geo information in urban management this book showcases the importance of GIS in better understanding current urban challenges and provides new insights on how to apply GIS in urban planning It illustrates through real world cases the use of GIS in analyzing and evaluating the position of disadvantaged groups and areas in cities and provides clear examples of applied GIS in urban sustainability and urban resilience The idea of sustainable development is still very much central in the new development agenda of the United Nations and in that sense it is of particular importance for students from both the Global South and Global North Professionals researchers and students alike will find this book to be an invaluable resource for understanding and solving problems relating to sustainable urban planning and management *Modelling Human-Environment*

Interactions in and beyond Prehistoric Europe Samuel Seuru, Benjamin Albouy, 2023-07-25 This book offers insight into the relationship between prehistoric and protohistoric human populations and the world around them. It reconstructs key aspects of the palaeoenvironment from large scale drivers of environmental conditions such as climate to more regional variables such as vegetation cover and faunal communities. The volume underscores how computational archaeology is leading the way in the study of past human environment interactions across spatial and chronological scales. With the increased availability of high resolution climate models, agent based modelling, palaeoecological proxies and the mature use of Geographic Information Systems in ecological modelling, archaeologists working in interdisciplinary settings are well positioned to explore the intersection of human systems and environmental affordances and constraints. These methodological advancements provide a better understanding of the role humans played in past ecosystems both in terms of their impact upon the environment and in return the impact of environmental conditions on human systems. They may also allow us to infer past ecological knowledge and land use patterns that are historically contingent rather than environmentally determined. This volume gathers contributions that combine reconstructions of past environments and archaeological data with a view to exploring their complex interactions at different scales and invites scholars from varying disciplines and backgrounds to present and compare different modelling approaches.

The Philosophy of GIS Timothy Tambassi, 2019-06-04 This anthology aims to present the fundamental philosophical issues and tools required by the reflection within and upon geography and Geographic Information Systems (GIS). It is an introduction to the philosophy for GIScience from an analytical perspective which looks at GIS with a specific focus on its fundamental and most general concepts and distinctions. The first part of the book is devoted to explore some of the main philosophical questions arising from GIS and GIScience which include among others investigations in ontology, epistemology, linguistics and geometrical modeling. The second part concerns issues related to spatial and cartographical representations of the geographical world. The third part is focused on the ontology of geography specifically in terms of geographical entities, objects and boundaries. Finally, in the fourth part, the topic of GIS constitutes a starting point for exploring themes such as quantum geography and disorientation and for defining professional profiles for geographers with competences in GIS environment. This book on a new and unexplored field of research could be a fundamental point of reference for professional philosophers and geographers interested in the theoretical reflection about the foundational concepts of GIScience. It is also interesting reading material for students both undergraduates, postgraduates and Ph.D. students in philosophy, geography, applied ontology, GIScience, geomatics and computer science.

Ancient Western Asia Beyond the Paradigm of Collapse and Regeneration (1200-900 BCE) Maria Grazia Masetti-Rouault, Ilaria Calini, Robert Hawley, Lorenzo d'Alfonso, 2024-05-07 New results and interpretations challenging the notion of a uniform macroregional collapse throughout the Late Bronze Age Eastern Mediterranean Ancient Western Asia Beyond the Paradigm of Collapse and

Regeneration 1200 900 BCE presents select essays originating in a two year research collaboration between New York University and Paris Sciences et Lettres The contributions here offer new results and interpretations of the processes and outcomes of the transition from the Late Bronze Age to the Iron Age in three broad regions Anatolia northern Mesopotamia and the Levant Together these challenge the notion of a uniform macroregional collapse throughout the Eastern Mediterranean followed by the regeneration of political powers Current research on newly discovered or reinterpreted textual and material evidence from Western Asia instead suggests that this transition was characterized by a diversity of local responses emerging from diverse environmental settings and culture complexes as evident in the case studies collected here in history archaeology and art history The editors avoid particularism by adopting a regional organization with the aim of identifying and tracing similar processes and outcomes emerging locally across the three regions Ultimately this volume reimagines the Late Bronze Iron Age transition as the emergence of a set of recursive processes and outcomes nested firmly in the local cultural interactions of western Asia before the beginning of the new unifying era of Assyrian imperialism

Climate of the Past, Present and Future Javier Vinós, 2022-09-20 This book is an unorthodox ground breaking scientific study on natural climate change and its contribution to ongoing multi centennial global warming The book critically reviews the effect of the following on climate Milankovitch cycles abrupt glacial Dansgaard Oeschger events Holocene climate variability the 1500 year cycle solar activity volcanic eruptions greenhouse gases energy transport Applying the scientific method to available evidence reveals that some of these phenomena are profoundly misunderstood by most researchers Milankovitch cycles are tied to orbital obliquity not to orbital precessional summer insolation glacial megatides might have triggered abrupt Dansgaard Oeschger events and tides are likely responsible for the related 1500 year climate cycle Climate change affects volcanic eruptions more than the opposite and secular variations in solar activity are more important to climate change during the Holocene than greenhouse gases In this book we see how important natural climate change has been on human societies of the past It also produces new climate projections for the 21st century and when the next glaciation could happen What emerges from this study of natural climate change is a central theme Variations in the transport of energy from the tropics to the poles have been neglected as a cause of climate change and solar activity variations affect climate by modulating this transport The author tells us Transporting more energy from a greenhouse gas rich region the tropics to a greenhouse gas poor region the poles increases the amount of energy lost at the top of the atmosphere The effect resembles a reduction in the greenhouse gas content The book presents the Winter Gatekeeper Hypothesis on how variations in solar activity regulate Earth s energy transport and in so doing affect atmospheric circulation the rotation of the planet and the El Niño Southern Oscillation This book is oriented toward students and academics in the climate sciences and climate anthropology and should also appeal to readers interested in the science of natural climate change The repercussions of Climate of the Past Present and Future are far reaching By uncovering a strong

natural climate change component it provides a novel view of anthropogenic climate change fossil energy use and our future climate a view quite different from the IPCC s gloomy projections
