 analysts differential equations specialists and graph theorists to provide a glimpse on recent mathematical trends whose
 commonalities have hitherto remained for the most part unnoticed The applied mathematician will be pleasantly surprised
 with the interpretation of a voting system in terms of the fixed points of a mapping given in the book as much as the classical
 analyst will be enthusiastic to find detailed discussions on the generalization of the notion of metric space in which the metric
 takes values on an abstract monoid Classical themes on fixed point theory are adapted to the diverse setting of graph theory
 thus uncovering a set of tools whose power and versatility will be appreciated by mathematicians working on either area The
 volume also includes recent results on variable exponent spaces which reveal much needed connections with partial
 differential equations while the incipient field of variational inequalities on manifolds also explored here will be of interest to
 researchers from a variety of fields
