

2.3. Large areas

The operator's manual states a maximum area of 1200-1500 m². The mower can, however, cover larger areas, up to 2000 m², depending on a number of factors:

- The geometric complexity of the area. Are there many trees, flower beds, narrow passages, etc.?
- How steady is the plot (Solar Mower only)?
- How fast does the grass grow? What's the climate like, is the lawn fed regularly, etc.?

If you are unsure, the best way to find out is to try. If the area is so big that it requires several mowers then they can be combined in a variety of ways. In the case of the Solar Mower, several machines can work within the same boundary wire, as long as the distance from the mower to the nearest length of wire never exceeds 35 m.

Auto Mower model 2000 can be programmed so that two mowers share one charging station. Both mowers can then work over a common area of 2400-3000 m² depending on the same factors mentioned above. The mowers are set for "double operation" by entering "84-18", and are reset with "8418". You should avoid using the timers if possible, but if you must use them the clocks and timers on both mowers must be synchronised. The advantages of "double operation" compared to two separate installations are as follows:

- Cheaper.
- No synchronisation of systems necessary.
- Simpler installation as only one charging station and one search loop are required.

Note that the incoming search loop must lay straight for about 2 m in front of the charging station to give good operation.

In the case of the Auto Mower model 98-99 it is not possible to let several mowers work together and share a charging station. Instead, they must each have separate adjacent areas, each with its own charging station. See chapter 6.4. The third option is to combine one Auto Mower with any number of Solar Mowers.

2.4. Sloping areas

The mowers can work on slopes with an incline of 15°. Auto Mowers a little more, Solar Mowers somewhat less. The mowers can be fitted with accessory weights that can be added in steps of 200-400 g (Art.No. 335-09 (13-01)) to allow mowing on greater inclines. Of course, you should use as little extra weight as possible to move the slopes in question. The mower will run a little faster downhill and in doing so come further over the boundary wire and may encounter problems in returning especially in damp weather conditions. It is therefore an advantage if the slope is not too steep just where the boundary wire is installed.
