Green Building: An Engineering Approach to Sustainable Construction Christian M. Carrico, 2025-06-05 Green Building An Engineering Approach to

Sustainable Construction fills a void in green building which has good textbook options for practitioners architects and sustainability experts but not an engineering focused textbook focused on green building This new text takes an engineering approach to evaluating green building techniques systems and materials The book examines the built environment from inside out looking at minimizing environmental impacts while also considering the economics and energy use and efficiency While not a test prep book it will provide the knowledge foundation that will help prepare the students to take the Leadership in Energy and Environmental Design accreditation exam As students are often unclear on the evolving employment prospects in this field particularly for the engineer the textbook also features six case studies showing different career pathways for engineers in this arena Takes a quantitative and analytical engineering approach to evaluating green building techniques systems and materials Includes dedicated engineering examples and end of chapter problems that help develop students problem solving and analytical skills Combines conceptual and calculational aspects that link to both big picture issues e g how many Hiroshima blasts per year is the radiative forcing equivalent to along with everyday considerations like climate change real life experiences how much do I have to insulate my chicken coop to keep them warm passively in the winter Links textbook coverage to ABET criteria for accreditation of engineering programs

Contractor's Guide to the Building Code Jack M. Hageman, 2008 Don't let your jobs be held up by failing code inspections Smooth sign off by the inspector is the goal but to make this ideal happen on your job site you need to understand the requirements of latest editions of the International Building Code and the International Residential Code Understanding what the codes require can be a real challenge This new completely revised Contractor's Guide to the Building Code cuts through the legalese of the code books It explains the important requirements for residential and light commercial structures in plain simple English so you can get it right the first time

From Bleeding Edge to Leading Edge Doug Tarry Jr., 2024-02-05 I've done complicated It's complicated Residential and commercial buildings account for 17% of Canada's greenhouse gas emissions In the United States that figure is roughly 29% Net Zero homes which produce at least as much energy as they consume will play a key role in the current global climate crisis by drastically reducing energy consumption in the housing sector Doug Tarry is a leading international authority on Net Zero homes His company Doug Tarry Homes Limited has certified more Net Zero Net Zero Ready homes over 500 and counting than any other builder in Canada The title of Doug's book *From Bleeding Edge to Leading Edge A Builders Guide to Net Zero Homes* refers to his complicated and sometimes painful journey to Net Zero Throughout the book Doug offers his first hand experience on what has worked and what hasn't in building Net Zero homes along with expert advice from some of the industry's leading builders building scientists and energy consultants Much has been written about the technical details of building high performance homes the what This book goes further and deals with the why and the how discussing topics such as holistic design embodied carbon the Four Principles of Modern Design the 100 year home and climate resiliency Written in plain language and infused with humor and storytelling this book is a must read

for builders renovators architects municipal officials industry stakeholders and home buyers anyone interested in the future of home building It will help builders and their teams get to Net Zero in less time with far less cost and pain **Building a Sustainable Home** Melissa Rappaport Schiffman,2018-08-07 The green building movement has produced hundreds of how to books and websites that are filled with tips about green building and what homeowners should do to go green While helpful and informative when it comes to making actual purchasing and installation decisions these books do not make it any easier for a homeowner to prioritize against a budget Here Schiffman shares her knowledge and experience for others to use in their journey toward a greener way of living Whether the reader is building a new home or doing a minor remodel a homeowner needs a framework by which to guide their decisions These decisions are based on values and the author posits that there are really only three reasons to go green For Our Health By building more sustainably we reduce our exposure to harmful chemicals and toxins For Our Wealth By building a more durable home and being more efficient with resources like water and electricity we reduce our monthly utility bills and ongoing maintenance expenses For Our Soul Collectively doing the right thing for our planet does make a difference and that is soul nourishing Learn the logistics of choosing windows insulation appliances and lighting Find out about FSC certified wood and about using reclaimed materials Here is everything you need to make your home sustainable *Energy Efficiency in Buildings* José Manuel Andújar,Sergio Gómez

Melgar,2020-04-28 Buildings are one of the main causes of the emission of greenhouse gases in the world Europe alone is responsible for more than 30% of emissions or about 900 million tons of CO2 per year Heating and air conditioning are the main cause of greenhouse gas emissions in buildings Most buildings currently in use were built with poor energy efficiency criteria or depending on the country and the date of construction none at all Therefore regardless of whether construction regulations are becoming stricter the real challenge nowadays is the energy rehabilitation of existing buildings It is currently a priority to reduce or ideally eliminate the waste of energy in buildings and at the same time supply the necessary energy through renewable sources The first can be achieved by improving the architectural design construction methods and materials used as well as the efficiency of the facilities and systems the second can be achieved through the integration of renewable energy wind solar geothermal etc in buildings In any case regardless of whether the energy used is renewable or not the efficiency must always be taken into account The most profitable and clean energy is that which is not consumed
