Water Management at Abandoned Flooded Underground Mines Christian Wolkersdorfer, 2008-02-01 Switching off the pumps of a mine is one of the last steps in the lifetime of a surface or underground mine As the water in the open space raises the water might become contaminated with different pollutants and eventually starts to flow in the open voids This book addresses the processes related to mine abandonment from a hydrogeological perspective After an introduction to the relevant hydrogeochemical processes the book gives detailed information about mine closure procedures Based on in situ measurements the hydrodynamic processes in a flooded mine are described and some of the mine closure flow models exemplified As all investigations base on precise data the book gives some key issues of monitoring and sampling especially flow monitoring Then the book shows some new methodologies for conducting tracer tests in flooded mines and gives some hints to passive mine water treatment At the end 13 well investigated case studies of flooded underground mine and mine water tracer tests are described and interpreted from a hydrodynamic point of view

Caracterización hidrológica y de los procesos erosivos en la cabecera del río Monachil (Granada) Juan María Gisbert Gallego, 2005-02-07 Sierra Nevada constituye una zona extensa y atractiva por su singularidad y complejidad Ocupa casi 170000 ha entre las provincias de Almería y Granada abarcando un total de 60 municipios En su enorme superficie existen desde terrenos casi vírgenes no modificados por el hombre hasta zonas donde se han transformado los ambientes naturales para aprovechar sus recursos La gran diversidad y variedad ecológica y paisajística de este entorno

endemismos en su flora y fauna geomorfológica peculiar y elevado potencial hidrológico contrastan con la fragilidad y vulnerabilidad de muchos de sus ecosistemas en este sentido hay que recordar que Sierra Nevada es declarada Parque Nacional Ley 3/1999 de 11 de enero siendo el de más reciente creación en España y más extenso 86208 hectáreas Las amenazas de la Sierra han sido tradicionalmente la caza y recolección furtivas así como el excesivo pastoreo En los últimos tiempos además es preciso añadir la utilización turística recreativa incontrolada en concreto los deportes y turismo invernales desarrollados en la estación de esquí de Pradollano cabecera del río Monachil y parte del D lar La subcuenca del río Monachil drena una parte de la fachada occidental del macizo de Sierra Nevada y pertenece a la cuenca del río Genil afluente por la margen izquierda del río Guadalquivir La característica más distintiva de esta cuenca con respecto a las colindantes es el alto grado de antropización a que está sometido su sector medio alto en el que además de pequeñas estaciones hidroeléctricas en cascada se ubica la única estación de esquí del sistema Penibético la de Pradollano La empresa CETURSA como consecuencia de su adjudicación como organizadora del Campeonato del Mundo de Esquí Alpino de 1996 comenzó las obras de acondicionamiento de la estación a tal evento Esto supuso un cambio profundo del medio que ha traído consigo un gran desequilibrio en un ambiente tan frágil como es la alta montaña nevadense Este desajuste se muestra especialmente sensible en lo tocante a la hidrología del río Monachil recursos hídricos riesgo de crecidas fusión de las nieves y procesos erosivos Por otro lado actualmente y pese a existir un conocimiento fisiográfico e hidrológico aceptable de forma descriptiva para el conjunto del macizo es muy deficiente el análisis de los procesos responsables del funcionamiento hidrológico a escala de subcuenca De modo general en este trabajo se aborda el análisis de los procesos que influyen en el comportamiento hidrológico de la cabecera del río Monachil así como el estudio de los procesos erosivos desencadenados por las actuaciones en la estación de esquí Para ello se tratan los siguientes apartados Establecimiento de las características climáticas generales de la cuenca alta media del río Monachil Estudio del medio físico atendiendo principalmente a los aspectos hidrológicos y cómo influyen en la erosión Esto se lleva a cabo mediante la caracterización geomorfológica del área tanto cualitativa como cuantitativa parámetros físicos de la cuenca Profundización en la caracterización espacio temporal de los caudales circulantes por las estaciones de aforo de Pradollano 2100 m s n m y Díchar 1600 m s n m Estudio de los eventos de máxima energía avenidas recursos y estimación de las distintas partidas del balance precipitación ETR sublimación escorrentía infiltración y de la escorrentía superficial subterránea deshielo subsuperficial Para ello se aplicarán diferentes metodologías y modelos que aportarán información al respecto Estudio de los procesos erosivos y formas resultantes cartografía para pasar a la estimación de la erosión mediante los análisis de sedimentos en suspensión y la aplicación de modelos paramétricos tipo USLE y MUSLE Esto permitirá determinar los lugares con erosión más intensa evaluar la superficie afectada por el proceso erosivo delimitar las causas de la misma y evaluar la eficacia de las medidas correctoras y protectoras propuestas para finalizar con una explicación de la evolución de los procesos erosivos que se han desarrollado en este sector en la última década Hydrologic and erosive

processes characterization in the river Monachil headwaters Grenade *Mine Water* Paul L. Younger, S.A. Banwart, Robert S. Hedin, 2012-12-06 Nowhere is the conflict between economic progress and environmental quality more apparent than in the mineral extraction industries The latter half of the 20th century saw major advances in the reclamation technologies However mine water pollution problems have not been addressed In many cases polluted mine water long outlives the life of the mining operation As the true cost of long term water treatment responsibilities has become apparent interest has grown in the technologies that would decrease the production of contaminated water and make its treatment less costly This is the first book to address the mine water issue head on The authors explain the complexities of mine water pollution by reviewing the hydrogeological context of its formation and provide an up to date presentation of prevention and treatment technologies The book will be a valuable reference for all professionals who encounter polluted mine water on a regular or occasional basis Geography of Water Resources Ram Kumar Gurjar, B. C. Jat, 2008 Water bodies on all the four sides surround the

globe yet we face water shortage in most nations In our country too not only the per capita water availability is falling drastically even the quality of available water is also fast deteriorating Over extraction of ground water has further led to many problems So there is a pressing need to educate the common man about the importance of effective management of water resources Geography of Water Resources fulfils this need This book has been introduced in the syllabus of universities and colleges in India as well as all over the world However much information concerning the water resources management lies scattered in various research publications which are beyond the reach of common man The book therefore presents a comprehensive well illustrated and documented account of the issues concerning water resources management In this various aspects of the scientific management of water resources such as their worldwide distribution and circulation through all spheres of earth water quality and its uses irrigation methods floods droughts watershed management traditional water harvesting techniques water ethics etc have been discussed It is hoped that the book will be of immense help not only to students researchers analysts commentators academicians and policy makers but also for those appearing in various competitive examinations Wind Engineering, 1977 A publication for papers and notes on all aspects of wind energy including basic engineering operational experience development planning and the many other institutional factors

Australian Journal of Experimental Agriculture, 1985 **Engineering Hydrology for Natural Resources Engineers** Ernest W. Tollner, 2023-08-14 This fully revised edition provides a modern overview of the intersection of hydrology water quality and water management at the rural urban interface The book explores the ecosystem services available in wetlands natural channels and ponds lakes As in the first edition Part I examines the hydrologic cycle by providing strategies for quantifying each component rainfall with NOAA 14 infiltration evapotranspiration and runoff Part II examines field and farm scale water quality with an introduction to erosion prediction and water quality Part III provides a concise examination of water management on the field and farm scale emphasizing channel design field control structures measurement structures

groundwater processes and irrigation principles Part IV then concludes the text with a treatment of basin scale processes A comprehensive suite of software tools is available for download consisting of Excel spreadsheets with some public domain models such as HY 8 culvert design and software with public domain readers such as Mathematica Maple and TK solver

Environmental Hydrology, Second Edition Andy D. Ward, Stanley W. Trimble, 2003-12-18 The technological advances of recent years include the emergence of new remote sensing and geographic information systems that are invaluable for the study of wetlands agricultural land and land use change Students hydrologists and environmental engineers are searching for a comprehensive hydrogeologic overview that supplements information on hydrologic processes with data on these new information technology tools Environmental Hydrology Second Edition builds upon the foundation of the bestselling first edition by providing a qualitative understanding of hydrologic processes while introducing new methods for quantifying hydrologic parameters and processes Written by authors with extensive multidisciplinary experience the text first discusses the components of the hydrologic cycle then follows with chapters on precipitation stream processes human impacts new information system applications and numerous other methods and strategies By updating this thorough text with the newest analytical tools and measurement methodologies in the field the authors provide an ideal reference for students and professionals in environmental science hydrology soil science geology ecological engineering and countless other environmental fields
