Practical Advanced Biology Tim King, Michael Reiss, Michael Roberts, 2001 An accessible resource that can be used alongside the Advanced Biology text or any other core Advanced Biology text as it covers the practical element for AS and A Level Biology Dissertation Abstracts International ,1999 **The Plant World** ,1915 **Index Medicus** ,2001 Vols for 1963 include as pt 2 of the Jan issue Medical subject headings **A Report for the Year ... on the Research and Other Activities of the Division of Biology** California Institute of Technology. Division of Biology, 1972 Biology Annual Report ,1971 *The Calendar of the University of the Punjab* University of the Punjab, 1970 Bibliography of Agriculture ,1992 **Author Index to Psychological Index ... and Psychological Abstracts ...** ,1960 **Bibliography of Agriculture with Subject Index** ,1995 **Biological & Agricultural Index** ,1991 **Asking Questions in Biology** Christopher J. Barnard, Francis Sylvest Gilbert, Peter K. McGregor, 2007 The complete guide to practical work in the biological sciences from conception of the investigation through data collection data analysis and finally presentation **Asking Questions in Biology** Christopher J. Barnard, Francis Sylvest Gilbert, Dr Peter McGregor, 2015 **Asking Questions in Biology** Christopher J. Barnard, Francis Gilbert, Francis Sylvest Gilbert, Peter K. McGregor, 2011 Asking the right questions in the right way is a fundamental skill in scientific enquiry This text introduces students of the biological sciences to the skills of observation and enquiry **Improved Tools for Large-scale Hypothesis Testing** Zihao Zheng, 2022 Large scale hypothesis testing as one of the key statistical tools has been widely studied and applied to high throughput bioinformatics experiments such as high density peptide array studies and brain image data sets The high dimensionality and small sample size of many experiments challenge conventional statistical approaches including those aiming to control the false discovery rate FDR Motivated by this in this dissertation I develop several improved statistical and computational tools for large scale hypothesis testing The first method MixTwice advances an empirical Bayesian tool that computes local false discovery rate statistics when provided with data on estimated effects and estimated standard errors I also extend this method from two group comparison problems to multiple group comparison settings and develop a generalized method called MixTwice ANOVA The second method GraphicalT calculates local FDRs semiparametrically using available graph associated information The first method MixTwice introduces an empirical Bayes approach that involves the estimation of two mixing distributions one on underlying effects and one on underlying variance parameters Provided with the estimated effect sizes and estimated errors MixTwice estimates the mixing distribution and calculates the local false discovery rates via nonparametric MLE and constrained optimization with unimodal shape constraint of the effect distribution Numerical experiments show that MixTwice can accurately estimate generative parameters and have good testing operating characteristics Applied to a high density peptide array it powerfully identifies non null peptides to recover meaningful peptide markers when the underlying signal is weak and has strong reproducibility properties when the underlying signal is

strong The second contribution of this dissertation generalizes MixTwice from scenarios comparing two conditions to scenarios comparing multiple groups Similar to MixTwice MixTwice ANOVA takes numerator and denominator statistics of F test to estimate two underlying mixing distributions Compared with other large scale testing tools for one way ANOVA settings MixTwice ANOVA has better power properties and FDR control through numerical experiments Applied to the peptide array study comparing multiple Sjogren disease SjD populations the proposed approach discovers meaningful epitope structure and novel scientific findings on Sjogren disease Numerical experiments support evaluation among testing tools Besides the methodology contribution of MixTwice in large scale testing I also discuss generalized evaluation and computational aspects For the former part I propose an evaluation metric in addition to FDR control power etc called reproducibility to provide a practical guide for different testing tools For the latter part I borrow the idea from pool adjacent violator algorithm PAVA and advance a computational algorithm called EM PAVA to solve nonparametric MLE with isotonic partial order constraint This algorithm is discussed through theoretical guarantees and computational performances The last contribution of this dissertation deals with large scale testing problems with graph associated data Different from many studies that incorporate the graph associated information through detailed modeling specifications GraphicalT provides a semiparametric way to calculate the local false discovery rates using available auxiliary data graph The method shows good performance in synthetic examples and in a brain imaging problem from the study of Alzheimer s disease
