Studies on Large Branchiopod Biology and Conservation Marie A. Simovich, Clay Sassaman, Denton Belk, 2013-04-17 This volume is a collection of papers concerning the biology of large branchiopod crustaceans Anostraca Conchostraca and Notostraca Many of the individual papers were first presented at the Third International Large Branchiopod Symposium ILBS 3 held at the University of San Diego CA USA July 15 18 1996 Contributions on additional topics from participants at the symposium and from colleagues not able to join us in San Diego are also included In addition there is a supplement to the 1995 Checklist of the Anostraca The theme of the ILBS 3 was understanding and conserving large branchiopod diversity Researchers from around the world

presented papers on a variety of topics related to conservation of large branchiopods with contributions ranging from alpha taxonomy and zoogeography to community structure and studies of ecology and evolution One important issue developed in many of the papers in this volume is the need to advance our understanding of basic aspects of branchiopod biology throughout the world in order to enhance our efforts to conserve them Although we have made important strides in understanding the biology of large branchiopods we have with few notable exceptions made little progress in assuring the conservation of their diversity We hope this volume will supply the reader with new ideas and generate enthusiasm for research and public education efforts on behalf of branchiopod conservation

RNA-Protein Interaction Protocols Susan R. Haynes, 2008-02-03 The molecular characterization of RNA and its interactions with proteins is an important and exciting area of current research Organisms utilize a variety of RNA protein interactions to regulate the expression of their genes This is particularly true for eukaryotes since newly synthesized messenger RNA must be extensively modified and transported to the cytoplasm before it can be used for protein synthesis The realization that posttranscriptional processes are critical components of gene regulation has sparked an explosion of interest in both stable ribonucleoprotein RNP complexes and transient RNA protein interactions RNA is conformationally flexible and can adopt complex structures that provide diverse surfaces for interactions with proteins The fact that short RNA molecules aptamers see Chapter 16 can be selected to bind many different types of molecules is evidence of the structural variability of RNA RNA molecules are rarely entirely single or double stranded but usually contain multiple short duplexes interrupted by single stranded loops and bulges in some RNAs such as tRNAs the short duplexes stack on each other Further variability is generated by the presence of non Watson Crick base pairs modified nucleotides and more complex structures such as pseudoknots and triple strand interactions
