The Classical Animated Documentary and Its Contemporary Evolution Cristina Formenti, 2022-03-24 The Classical Animated Documentary and Its Contemporary Evolution is the first book to provide an historical insight into the animated documentary Drawing on archival research and textual analysis it shows how this form usually believed to be strictly contemporaneous instead took shape in the 1940s Cristina Formenti integrates a theoretical and a historical approach in order to shed new light on the animated documentary as a form as well as on the work of renowned studios such as The Walt Disney Studios Halas Batchelor National Film Board of Canada and never before addressed ones such as Corona Cinematografica She also highlights the differences and the similarities existing among the animated documentaries created between the 1940s and the mid 1980s and those produced today so as to demonstrate how the latter do not represent a complete otherness in respect to the former but rather an evolution The Index of Training Films B.S. Inc, *Animation* Chris Pallant, 2021-01-01 Animation Critical and Primary Sources is a major multi volume work of reference that brings together seminal writings on animation studies Gathering historical and contemporary texts from a wide ranging number of sources the volumes provide a key resource in understanding and studying the past and future directions of animation studies The four volumes thematically trace animation studies from its many definitions or a lack thereof to the institutional nature of animation production to establishing greater space within animation discourse for the consideration of broadcast and interactive animation and finally giving greater contextual understanding of the field of animation studies by focusing on Authorship Genre Identity Politics and Spectatorship thus enabling readers to engage more deeply with the ideas discussed in the final volume Ordering the collection in this way avoids imposing an overly simplistic chronological framework thereby allowing debates that have developed over years and even decades to stand side by side Each volume is separately introduced and the essays structured into coherent sections on specific themes **Animation and Advertising** Malcolm Cook, Kirsten Moana Thompson, 2019-12-17 Throughout its history animation has been fundamentally shaped by its application to promotion and marketing with animation playing a vital role in advertising history In individual case study chapters this book addresses among others the role of promotion and advertising for anime Disney MTV Lotte Reiniger Pixar and George Pal and highlights American Indian Japanese and European examples This collection reviews the history of famous animation studios and artists and rediscovers overlooked ones It situates animated advertising within the context of a diverse intermedial and multi platform media environment influenced by print radio and digital practices and expanding beyond cinema and television screens into the workplace theme park trade expo and urban environment It reveals the part that animation has played in shaping our consumption of particular brands and commodities and assesses the ways in which animated advertising has both changed and been changed by the technologies and media that supported it including digital production and distribution in the present day Challenging the traditional privileging of art or entertainment over

commercial animation Animation and Advertising establishes a new and rich field of research and raises many new questions concerning particular animation and media histories and our methods for researching them **Explanatory Animations in the Classroom** Brendan Jacobs, 2020-03-06 This book provides groundbreaking evidence demonstrating how student authored explanatory animations can embody and document learning as an exciting new development within digital pedagogy Explanatory animations can be an excellent resource for teaching and learning but there has been an underlying assumption that students are predominately viewers rather than animation authors The methodology detailed in this book reverses this scenario by putting students in the driver s seat of their own learning This signals not just a change in perspective but a complete change in activity that to continue the analogy will forever change the conversation and make redundant phrases like Are we there yet and How much longer The digital nature of such practices provides compelling evidence for reconceptualising explanatory animation creation as a pedagogical activity that generates multimodal assessment data Tying together related themes to advance approaches to evidence based assessment using digital technologies this book is intended for educators at any stage of their journey including pre service teachers **Thermal Engineering Studies with Excel, Mathcad and Internet** Valery Ochkov, Konstantin Orlov, Volodymyr Voloshchuk, 2016-02-05 This book provides the fundamentals of the application of mathematical methods modern computational tools Excel Mathcad SMath etc and the Internet to solve the typical problems of heat and mass transfer thermodynamics fluid dynamics energy conservation and energy efficiency Chapters cover the technology for creating and using databases on various properties of working fluids coolants and thermal materials All calculation methods are provided with links to online computational pages where data can be inserted and recalculated It discusses tasks involving the generation of electricity at thermal nuclear gas turbine and combined cycle power plants as well as processes of co and trigeneration conditioning facilities and heat pumps This text engages students and researchers by using modern calculation tools and the Internet for thermal engineering applications Thermodynamics Sanford Klein, Gregory Nellis, 2011-10-10 This book differs from other thermodynamics texts in its objective which is to provide engineers with the concepts tools and experience needed to solve practical real world energy problems The presentation integrates computer tools such as EES with thermodynamic concepts to allow engineering students and practising engineers to solve problems they would otherwise not be able to solve The use of examples solved and explained in detail and supported with property diagrams that are drawn to scale is ubiquitous in this textbook The examples are not trivial drill problems but rather complex and timely real world problems that are of interest by themselves As with the presentation the solutions to these examples are complete and do not skip steps Similarly the book includes numerous end of chapter problems both typeset and online Most of these problems are more detailed than those found in other thermodynamics textbooks The supplements include complete solutions to all exercises software downloads and additional content on selected topics These are available on the book s
