Liability For Crimes Involving Artificial Intelligence Systems:

Liability for Crimes Involving Artificial Intelligence Systems Gabriel Hallevy,2014-11-06 The book develops a general legal theory concerning the liability for offenses involving artificial intelligence systems The involvement of the artificial intelligence systems in these offenses may be as perpetrators accomplices or mere instruments The general legal theory proposed in this book is based on the current criminal law in most modern legal systems In most modern countries unmanned vehicles sophisticated surgical systems industrial computing systems trading algorithms and other artificial intelligence systems are commonly used for both industrial and personal purposes The question of legal liability arises when something goes wrong e g the unmanned vehicle is involved in a car accident the surgical system is involved in a surgical error or the trading algorithm is involved in fraud etc Who is to be held liable for these offenses the manufacturer the programmer the user or perhaps the artificial intelligence system itself The concept of liability for crimes involving artificial intelligence systems has not yet been widely researched Advanced technologies are forcing society to face new challenges both technical and legal The idea of liability in the specific context of artificial intelligence systems is one such challenge that should be thoroughly explored *Principle of Criminal Imputation for Negligence Crime Involving Artificial Intelligence* Shuhong Zhao,2024-02-24 This book provides an in depth discussion of the theoretical and practical issues of criminal imputation for negligence crime involving artificial intelligence Accordingly this study combines the imputation challenges brought about by AI with traditional criminal imputation theory and analyses imputation for negligence crime involving AI from three aspects the basic principles structure and results of imputation for negligence crime involving AI The traditional theory of imputation is discussed in detail The readership is a group of people interested in this topic including in particular interested laymen undergraduate students and postgraduate researchers The highlights of this book are it identifies the imputation challenges bought about by AI reveals the theoretical and practical gap in the criminal imputation of negligent crimes involving AI and provides an in depth and creative ideas of criminal imputation for the negligent crimes involving AI
Research Handbook on the Law of Artificial Intelligence Woodrow Barfield,Ugo Pagallo,2025-06-09 This second edition provides a broad range of perspectives on the legal implications of artificial intelligence AI across different global jurisdictions Contributors identify the potential threats that AI poses to the protection of rights and human wellbeing anticipating future developments in technological and legal infrastructures **Advanced Introduction to Law and Artificial Intelligence** Woodrow Barfield,Ugo Pagallo,2020-10-30 Woodrow Barfield and Ugo Pagallo present a succinct introduction to the legal issues related to the design and use of artificial intelligence AI Exploring human rights constitutional law data protection criminal law tort law and intellectual property law they consider the laws of a number of jurisdictions including the US the European Union Japan and China making reference to case law and statutes *The Matrix of Insanity in Modern Criminal Law* Gabriel Hallevy,2015-06-30 This book challenges the assumptions of modern criminal law that

insanity is a natural legally and medically defined phenomenon covering a range of medical disorders By doing so it paves the way for a new perspective on insanity and can serve as the basis for a new approach to insanity in modern criminal law The book covers the following aspects the structure of the principle of fault in modern criminal law the development of the insanity defense in criminal law tangential in personam defenses in criminal law and their implications for insanity and the legal mechanism of reproduction of fault The focus is on the Anglo American and European Continental legal systems Given the attention consistently drawn by international and domestic events in this context the book will be of interest to a broad and growing international audience   **Legal Aspects of Autonomous Systems** Dário Moura Vicente,Rui Soares Pereira,Ana Alves Leal,2024-01-02 As computational power the volume of available data IT systems autonomy and the human like capabilities of machines increase robots and AI systems have substantial and growing implications for the law and raise a host of challenges to current legal doctrines The main question to be answered is whether the foundations and general principles of private law and criminal law offer a functional and adaptive legal framework for the autonomous systems phenomena The main purpose of this book is to identify and explore possible trajectories for the development of civil and criminal liability for our understanding of the attribution link to autonomous systems and in particular for the punishment of unlawful conduct in connection with their operation AI decision making processes including judicial sentencing also warrant close attention in this regard Since AI is moving faster than the process of regulatory recalibration this book provides valuable insights on its redesign and on the harmonization at the European level of the current regulatory frameworks in order to keep pace with technological changes Providing a broader and more comprehensive picture of the legal challenges posed by autonomous systems this book covers a wide range of topics including the regulation of autonomous vehicles data protection and governance personality rights intellectual property corporate governance and contract conclusion and termination issues arising from automated decisions blockchain technology and AI applications particularly in the banking and finance sectors The authors are legal experts from around the world with extensive academic and or practical experience in these areas   **Autonomous Weapons Systems and the Protection of the Human Person** Mauri, Diego,2022-05-24 This book aims to understand how public organizations adapt to and manage situations characterized by fluidity ambiguity complexity and unclear technologies thus exploring public governance in times of turbulence   **Is Law Computable?** Simon Deakin,Christopher Markou,2020-11-26 What does computable law mean for the autonomy authority and legitimacy of the legal system Are we witnessing a shift from Rule of Law to a new Rule of Technology Should we even build these things in the first place This unique volume collects original papers by a group of leading international scholars to address some of the fascinating questions raised by the encroachment of Artificial Intelligence AI into more aspects of legal process administration and culture Weighing near term benefits against the longer term and potentially path dependent implications of replacing human legal authority with computational systems this volume pushes back against the more uncritical accounts

of AI in law and the eagerness of scholars governments and LegalTech developers to overlook the more fundamental and perhaps bigger picture ramifications of computable law With contributions by Simon Deakin Christopher Markou Mireille Hildebrandt Roger Brownsword Sylvie Delacroix Lyria Bennet Moses Ryan Abbott Jennifer Cobbe Lily Hands John Morison Alex Sarch and Dilan Thampapillai as well as a foreword from Frank Pasquale **Individual Criminal Responsibility for Autonomous Weapons Systems in International Criminal Law** Barry de Vries,2023-02-27 In this book Barry de Vries addresses the issue of autonomous weapons in international criminal law The development of autonomous weapon systems is progressing While the technology advances attempts to regulate these weapons are not keeping pace It is therefore likely that these weapons will be developed before a new legal framework is established Many legal questions still remain and one of the most important ones among them is how individual responsibility will be approached Barry de Vries therefore considers this issue from a doctrinal international criminal law perspective to determine how the current international criminal law framework will address this topic **Elgar Encyclopedia of Law and Data Science** Comandé, Giovanni,2022-02-18 This Encyclopedia brings together jurists computer scientists and data analysts to map the emerging field of data science and law for the first time uncovering the challenges opportunities and fault lines that arise as these groups are increasingly thrown together by expanding attempts to regulate and adapt to a data driven world It explains the concepts and tools at the crossroads of the many disciplines involved in data science and law bridging scientific and applied domains Entries span algorithmic fairness consent data protection ethics healthcare machine learning patents surveillance transparency and vulnerability **A World with Robots** Maria Isabel Aldinhas Ferreira,Joao Silva Sequeira,Mohammad Osman Tokhi,Endre E.
