Model Questions Of Ict Jsc:

Proceedings ICT'02, 2002 **Culturally Sustainable Social Robotics** M. Nørskov, J. Seibt, O.S. Quick, 2021-01-04 The subject of social robotics has enormous projected economic significance. However, social robots not only present us with novel opportunities but also with novel risks that go far beyond safety issues. It is a potentially highly disruptive technology which could negatively affect the most valuable parts of the fabric of human social interactions in irreparable ways. Since engineering educations do not yet offer the necessary competences to analyze holistically, assess and constructively mitigate these risks, new alliances must be established between engineering and SSH disciplines with special emphasis on the humanities, i.e. disciplines specializing in the analysis of socio-cultural interactions and human experience. The Robophilosophy Conference Series was established in 2014 with the purpose of creating a new forum and catalyzing the research discussion in this important area of applied humanities research with focus on robophilosophy. Robophilosophy conferences have been the world's largest venues for humanities research in and on social robotics. The book at hand presents the proceedings of Robophilosophy Conference 2020 Culturally Sustainable Social Robotics, the fourth event in the international biennial Robophilosophy Conference Series which brought together close to 400 participants from 29 countries. The speakers of the conference whose contributions are collected in this volume were invited to offer concrete proposals for how the Humanities can help to shape a future where social robotics is guided by the goals of enhancing socio-cultural values rather than by utility alone. The book is divided into 3 parts: Abstracts of Plenaries which contains 6 plenary sessions; Session Papers with 44 papers under 8 thematic categories; and Workshops containing 25 items on 5 selected topics. Providing concrete proposals from philosophers and other SSH researchers for new models and methods, this book will be of interest to all those involved in developing artificial social agents in a culturally sustainable way that is also a fortiori ethically responsible.

Handbook of Research on Establishing Digital Competencies in the Pursuit of Online Learning Podovšovnik, Eva, De Giuseppe, Tonia, Corona, Felice, 2023-07-14 After two years of forced changes in the educational system and shifting to a new model where online learning became a reality, students and teachers gained a lot of experience and new insights into online learning. Thus, it is relevant for educators, managers of schools, and developers of online applications to understand what was learned during the pandemic in order to adapt to the new situation. The Handbook of Research on Establishing Digital Competencies in the Pursuit of Online Learning considers important lessons learned about online teaching during the pandemic, the experiences of educators, and the perspectives of students and teachers. The book also assists educators in designing their learning process for it to be more student- and teacher-oriented. Covering key topics such as technology, digital skills, and distance learning, this reference work is ideal for industry professionals, administrators, policymakers, principals, researchers, academicians, scholars, instructors, and students.

Complementarity, Catalysts, Compliance Christian M. De Vos, 2020-04-23 Since its establishment at the turn of the century a central preoccupation of the International Criminal Court (ICC) has been to catalyse the pursuit of criminal accountability at the domestic level Drawing on ten years of research this book theorizes the ICC's principle of complementarity as a transnational site and adaptive strategy for realizing an array of ambitious governance goals Through a grounded interdisciplinary approach it illustrates how complementarity came to be framed as a catalyst for compliance and its unexpected effects on the legal frameworks and institutions of three different ICC situation countries in Africa Uganda Kenya and the Democratic Republic of Congo Linking complementarity's law and practice to contemporary debates in international law and relations the book unsettles international law's dominant progressive narrative It urges a critical rethinking of the ICC's politics and a reorientation towards international criminal justice as a project of global legal pluralism

Functional Supramolecular Nanoassemblies of π -Conjugated Molecules Penglei Chen, Bin Wu, 2020-01-13 conjugated systems of delocalized aromatic electrons along their backbones including conjugated small molecules oligomers polymers and carbonaceous materials etc have received considerable attention from a wide variety of scientific and technical communities Compared to inorganic materials the advantages of those based on tectons lie in their broad diversity flexibility and tunability with regard to structure geometry morphology processability composition functionality electronic band structure etc In terms of sophisticated molecular engineering these features endow them not only with excellent self-assembly properties but also with unique optical electrical mechanical photophysical photochemical and biochemical attributes This renders them promising scaffolds for advanced functional materials AFMs in numerous areas of general interest such as electronics optics optoelectronics photovoltaics magnetic and piezoelectric devices sensors catalysts

biomedicines and others With regard to the design synthesis of novel tectons the launch of diverse assembly fabrication protocols theoretical calculations etc the past several decades have witnessed tremendous advancements along this direction Thus far a vast array of high performance tectons based AFMs have been initiated To some extent the cooperative principle of stacking and other noncovalent interactions has been revealed and the structure property relationships have been disclosed Despite the existing progress this field still faces challenges for example i the need for scalable assembly manufacture under ambient conditions with low cost facile environmentally friendly protocols ii clearer correlations bridging the underlying intricate relationships of each successive step in assembly manufacture iii corresponding theoretical calculations for guiding the rational design of tectons that elucidate the cooperative principle of stacking and other noncovalent interactions as well as the principle of structure performance correlation iv stability and durability among the most important concerns regarding their commercialization The advancements accumulated during the past decades have established a solid foundation for the further development of conjugated systems based AFMs We believe that with unrelenting efforts from both scientific and technical communities of various backgrounds their practical applications will eventually be fulfilled This Research Topic aims to address the above mentioned challenges
