of Einstein's theory to string theory and loop quantum gravity *Modeling, Dynamics, Optimization and Bioeconomics I* Alberto Adrego Pinto, David Zilberman, 2014-06-20 This volume explores the emerging and current cutting edge theories and methods of modeling optimization dynamics and bio economy It provides an overview of the main issues results and open questions in these fields as well as covers applications to biology economy energy industry physics psychology and finance The majority of the contributed papers for this volume come from the participants of the International Conference on Modeling Optimization and Dynamics ICMOD 2010 a satellite conference of EURO XXIV Lisbon 2010 which took place at Faculty of Sciences of University of Porto Portugal and from the Berkeley Bio economy Conference 2012 at the University of California Berkeley USA **How to create a Game** M Ramadhan, 2020-06-12 Video game development is the process of developing a video game The effort is undertaken by a developer ranging from a single person to an international team dispersed across the globe Development of traditional commercial PC and console games is normally funded by a publisher and can take several years to reach completion Indie games usually take less time and money and can be produced by individuals and smaller developers The independent game industry has been on the rise facilitated by the growth of accessible game development software such as Unity platform and Unreal Engine 1 and new online distribution systems such as Steam and Uplay as well as the mobile game market for Android and iOS devices The first video games developed in the 1960s were not usually commercialised They required mainframe computers to run and were not available to the general public Commercial game development began in the 70s with the advent of first generation video game consoles and early home computers like the Apple I At that time owing to low costs and low capabilities of computers a lone programmer could develop a full and complete game However in the late 80s and 90s ever increasing computer processing power and heightened expectations from gamers made it difficult for a single person to produce a mainstream console or PC game The average cost of producing a triple A video game slowly rose from US 1.4 million in 2000 to over 5 million in 2006 then to over 20 million by 2010 citation needed Mainstream commercial PC and console games are generally developed in phases first in pre production pitches prototypes and game design documents are written if the idea is approved and the developer receives funding then full scale development begins The development of a complete game usually involves a team of 20-100 individuals with various responsibilities including designers artists programmers and testers **From 'Science in the Making' to Understanding the Nature of Science** Mansoor Niaz, 2012-02-06 The Nature of Science is highly topical among science teacher educators and researchers Increasingly it is a mandated topic in state curriculum documents This book draws together recent research on Nature of Science studies within a historical and philosophical framework suitable for students and teacher educators Traditional science curricula and textbooks present science as a finished product Taking a different approach this book provides a glimpse of science in the making scientific practice imbued with arguments controversies and competition among rival theories and explanations Teaching about science in the making is a rich source of

motivating students to engage creatively with the science curriculum Readers are introduced to science in the making through discussion and analysis of a wide range of historical episodes from the early 19th century to early 21st century Recent cutting edge research is presented to provide insight into the dynamics of scientific progress More than 90 studies from major science education journals related to nature of science are reviewed A theoretical framework field tested with in service science teachers is developed for moving from science in the making to understanding the Nature of Science
