Biocivilisations is a fascinating original and important exploration into how complex civilisations existed on Earth long before humans What is life This is arguably the most important question in all of science Many scientists believe life can be reduced to mechanistic factors such as genes and information codes Everything can be sequenced and explained But in a world as rich and complex as this one can such an assertion really be true A growing army of scientists philosophers and artists do not share this mechanistic vision for the science of life The gene metaphor is not only too simplistic but also misleading If there is a way to reduce life to a single principle how does that principle acknowledge the creativity of life that turns both genetic and information determinism on their heads *Biocivilisations* is a groundbreaking book exploring the mysteries of life and its deep uncertainty Dr Predrag Slijepcevi turns anthropocentric scientific thinking on its head showing how the humble bacteria created the equivalent of cities and connected them with information highways bringing our planet to life three thousand million years ago He explains how bacteria amoebas plants insects birds whales elephants and countless other species not only preceded human beings but also demonstrate elements of complex civilisation communication agriculture science art medicine and more that we associate with human achievement More than 99.99 percent of life on Earth has existed without humanity and life will continue without humans long into the future *Biocivilisations* is an important rethinking of the current scientific paradigm It challenges us to reconsider the limited scope and time window of our current scientific revolution and to fundamentally reimagine what we call life on Earth *Engineered Biomimicry* Michael S. Ellison, 2013-05-24 In a sense the archetype of bioinspiration for materials design and use is textiles The field of biomimesis has spawned many new materials and continues to be a fruitful field of investigation This chapter presents the current state of bioinspiration in textiles how this has resulted in improved fibrous materials how it may inform our continued progress Because I have found many preconceived notions about the field that need addressing before the application of biomimetics to textiles can be truly appreciated I begin with an introduction to textiles Next naturally enough the discipline of biomimesis is introduced and then fleshed out in terms of its textile engineering importance Following this some details on fiber and textile science and engineering are discussed and biological concepts germane to our topic are presented In the last step in this journey the marriage of biomimesis and textiles is performed and some consequences revealed Finally I offer some prognostications on the topic
