Engineering Economy is the analysis and evaluation of the factors that will affect the economic success of engineering projects to the end that a recommendation can be made which will insure the best use of capital.

Principles of Engineering Economy

1. **Develop the Alternatives**
The choice (decision) is among alternatives. The alternatives need to be identified and defined for subsequent analysis.
2. **Focus on the Differences**
Only the differences in expected future outcomes among the alternatives are relevant to their comparison and should be considered in the situation.
3. **Use a Consistent Viewpoint**
The prospective outcomes of the alternatives, economic and other, should be consistently developed from a defined viewpoint (perspective)
4. **Use a Common Unit of Measure**
Using a common unit of measurement to enumerate as many of the prospective outcomes as possible will simplify the analysis of alternatives.
5. **Consider all Relevant Criteria**
Selection of a preferred alternative requires the use of several criteria. The decision process should consider both outcomes enumerated in monetary unit and those expressed in some other unit of measurement or made explicit in a descriptive manner.
6. **Make Uncertainty Explicit**
Risk and uncertainty are inherent in estimating the future outcomes of the alternatives and should be recognized in the analysis and comparison.
7. **Revisit your Decisions**
Improved decision making results from an adaptive process; to the extent practicable, the initial projected outcomes of the selected alternatives should be subsequently compared with actual results achieved.
