

removal procedure, making sure a thrust washer (17) is placed on each pivot pin. Tighten pivot pin support and center steering arm cap screws to a torque of 180-220 ft.-lbs., then bend locking plates against steering arm cap screw heads.

2. SPINDLE BUSHINGS. To renew spindle bushings, support front of tractor and remove front wheels. Remove steering arm clamp bolts on models so equipped, pull arms from spindles and remove Woodruff keys (8—Fig. 1). On models equipped with spindles having splined end is shown in Fig. 1, remove retaining nut (24) and pull steering arm from spindle. Withdraw spindles downward out of axle extensions. Remove seals (7) and thrust bearing (3). Remove thrust bearing spacers (2) if worn or damaged. Drive bushings from axle extensions and install new bushings using piloted drift or driver; bushings are pre-sized and should not require reaming if carefully installed. Be sure grease holes are aligned. Pack thrust bearings with grease.

NOTE: Upper ends of early spindles with a key were 1 1/4 inches in diameter

whereas late spindles with a key are approximately 1-5/8 inches. Only the large diameter spindle is available. If renewing small spindle, a new large diameter steering arm must also be installed. Be sure correct size spindle seal is installed. Tighten steering arm clamp bolts on models equipped with keyed spindles to a torque of 135-165 ft.-lbs. On models with splined spindles, tighten retaining nuts (24—Fig. 1) to a torque of 200-250 ft.-lbs. Stake spindle threads to nut.

3. AXLE CENTER MEMBER, PIVOT PINS AND BUSHINGS. To remove axle center member (20—Fig. 1), support front of tractor, remove clamp bolts from tie rods and unbolt axle extensions from center member. Withdraw axle extensions with spindles and wheels from center member and tie rod sleeves. Unbolt and remove center steering arm with tie rods. Support center member and unbolt front pivot pin support. Move center member and front pivot forward until clear of rear pivot pin and lower to floor. Unbolt and remove rear pivot pin and support.

Pivot pins are integral parts of pivot pin supports; renew the pin and sup-

port assembly if pin is excessively worn. Renew bushings (18) in center member if member is otherwise serviceable; bushings are pre-sized and should not require reaming if carefully installed. Be sure grease holes are aligned and install plug (19) in bore through axle tube. Renew thrust washers (17) if worn.

Reinstall by reversing removal procedure. Tighten pivot pin support and center steering arm cap screws to a torque of 180-220 ft.-lbs., then bend locking plates against steering arm cap screw heads. Tighten tie rod clamp bolts to a torque of 25-35 ft.-lbs. and check toe-in as outlined in paragraph 4.

4. TIE RODS AND TOE-IN. Tie rod ends are of the non-adjustable automotive type and procedure for renewing same is evident. Tighten clamp bolts on outer tie rod ends to a torque of 25-35 ft.-lbs. and tighten jam nut at inner end of tie rods to a torque of 100-125 ft.-lbs.

Toe-in on both row crop and all purpose models should be 1/4- to 3/8-inch. Position center steering arm at center line of tractor as shown in Fig. 2 or Fig. 3 before checking toe-in at spindle height. If toe-in is not correct, remove

Fig. 1—Exploded view of row crop type wide adjustable front axle. All purpose type front axle is similar except that center member (20) is reversed to provide shorter wheelbase. Note that later models are equipped with spindles (1A) and steering arms are retained by a nut as shown in inset. All parts except center steering arm (13) and inner tie-rod ends (12) are interchangeable between row crop and all purpose types. Refer to Figs. 2 and 3 for center steering arm views.
