

MILITARY HEALTH SYSTEM MHS GENESIS

Information for Kimbrough Ambulatory Care Center Beneficiaries

COMING TO KIMBROUGH MARCH 25, 2023

MHS GENESIS is the new electronic health record for the Military Health System (MHS). It integrates inpatient and outpatient electronic health records across the continuum of care from the point of injury to the military treatment facility. MHS GENESIS is integral in the provision and coordination of safe, quality care. Kimbrough will transition to MHS GENESIS March 25, 2023.

How does this affect your access to health care?

As we transition to the new electronic health record system, our providers and staff will need time to adjust to the new work flows, procedures, and processes. We slowed down our operations to ensure safe patient care is maintained during this transition. Please expect delays.

During this time, you can expect to experience:

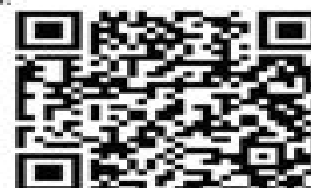

- Longer appointment times
- Increased wait times for Pharmacy pick up
- Reduced appointment availability
- Increased wait times for Lab & Radiology results

How will MHS GENESIS improve your overall experience?

MHS GENESIS allows you to securely access your electronic health records 24/7 and exchange messages with your military health care team when and where it's convenient for your schedule. It provides more efficient management of chronic, complex, and time-sensitive health conditions; provides automated, real-time clinical decision support for health care teams; and increases patient engagement capabilities that allow patients to communicate directly with providers.

How do I access the MHS GENESIS Patient Portal?

To access the MHS GENESIS Patient Portal, visit <https://patientportal.mhsgenesis.health.mil> or scan the QR code.

What can I do within the MHS GENESIS Patient Portal?

- Manage primary care medical and dental appointments
- Review clinical notes, referrals, and lab and test results
- Request prescription renewals
- Exchange secure messages with your health care team
- Monitor health information and view your portal profile
- Complete a pre-visit, dental health history questionnaire online

Gupta, 2017-10-01 Land and water the two crucial natural resources for agriculture are decreasing as a result of burgeoning population of the country At the same time various forms of degradation are taking a toll on the productivity of these resources so much so that large areas have been taken out of plough Current assessment reveals that already 6.73 million ha area has gone out of cultivation because of excessive salts or high sodicity and this area is likely to expand to 20 million ha by 2050 because of the faulty irrigation and drainage water management practices being adopted in irrigation commands Of the current affected area more than 50% is sodic in nature which requires some kind of chemical amendment for reclamation While our knowledge and understanding of the causes nature and harmful effects of sodic soils have tremendously increased availability of gypsum on account of environmental problems on its mining has caused concerns Apparently there is a need to push for other amendments especially the industrial wastes and publish the information in practical terms for various stakeholders This book is an attempt in this direction Taking into account the widely varying needs of the clients the chapters of this book have been organized to include history origin and genesis of sodic lands basic principles of diagnosis nature and properties of sodic lands amendments reclamation package and alternate land management Since sodic water irrigation is one of the factors in the formation of sodic lands a separate chapter deals with this issue highlighting the extent and distribution chemical characteristic and management options for the use of sodic water The economic analysis procedures and socio economic issues of sodic land reclamation are included in a separate chapter with appropriate case studies Since latest scientific information on new technologies with case studies is included we believe that this book is an improvement over the existing books and is a useful addition to the literature on this subject In our view the information contained in this book would be handy to field practitioners in the Government Departments and NGOs to plan and undertake large sodic land reclamation projects Since the basic principles and practices have been very well elucidated the book can be used as a text book in agricultural and engineering colleges It can also be used as a source material in training programs being organized by various scientific organizations We believe that the book would prove to be a handy reference resource to all those interested in sustainable irrigated agriculture for the food and nutritional security of the nation
