Entropy Based Fatigue, Fracture, Failure Prediction and Structural Health Monitoring Cemal Basaran, 2021-01-13

Traditionally fatigue fracture damage mechanics are predictions are based on empirical curve fitting models based on experimental data However when entropy is used as the metric for degradation of the material the modeling process becomes physics based rather than empirical modeling Because entropy generation in a material can be calculated from the fundamental equation of the material This collection of manuscripts is about using entropy for Fatigue Fracture Failure Prediction and Structural Health Monitoring The theoretical paper in the collection provides the mathematical and physics framework behind the unified mechanics theory which unifies universal laws of motion of Newton and laws of thermodynamics at an ab initio level Unified Mechanics introduces an additional axis called Thermodynamic State Index axis which is linearly independent from

Newtonian space $x y z$ and time As a result derivative of displacement with respect to entropy is not zero in unified mechanics theory as in Newtonian mechanics Any material is treated as a thermodynamic system and fundamental equation of the material is derived Fundamental equation defines entropy generation rate in the system Experimental papers in the collection prove validity of using entropy as a stable metric for Fatigue Fracture Failure Prediction and Structural Health Monitoring
