 Mori,2023-10-03 This open access book studies how foreign models of economic development can be effectively learned by
 and applied to today s latecomer countries Policy capacity and societal learning are increasingly stressed as pre conditions
 for successful catch up However how such learning should be initiated by individual societies with different features needs to
 be explained The book answers this pragmatic question from the perspective of Japan s past experience and its extensive
 development cooperation in Asia Africa and Latin America Since the late nineteenth century Japan has developed a unique
 philosophy and method for adopting advanced technologies and systems from the West the same philosophy and method
 govern its current cooperation with the developing world The key concepts are local learning and translative adaptation
 Local learning says that development requires the learner to adopt a proactive mindset and the goal of graduating from
 receiving aid Meanwhile translative adaptation requires foreign models be modified to fit local realities given the different
 structures of the home and foreign society The development process must be wholly owned by the domestic society in
 rejection of copy and paste acceptance These ideas not only informed Japan but are key to successful development for all The
 book also asks how this learning method should or should not be revised in the age of SDGs and digitalization Following the
 overview section that lays out the general principles the book offers many real cases from Japan and other countries The
 concrete actions outlined in these cases with close attention to individual growth ingredients as opposed to general theories
 are crucial to successful policy making The book contains materials that are highly useful for national leaders and
 practitioners within developing countries as well as students of development studies Kenya Gazette ,1990-02-23 The
