

DNA Structure and Replication

What is genetic information and how is it passed?

Chapter 1

Genetic information is stored in DNA in the sequence of bases. In eukaryotes, the genetic information is stored in chromosomes, which are made of DNA and proteins. In prokaryotes, the genetic information is stored in a single circular chromosome. The structure of DNA is a double helix, with two strands of DNA twisted around each other. The strands are made of sugar-phosphate backbones, with nitrogenous bases in the middle. The bases are paired: Adenine (A) pairs with Thymine (T), and Guanine (G) pairs with Cytosine (C).
