

# HOW TO PROTECT YOURSELF AND YOUR INFORMATION ONLINE

**Use a secure and trusted browser** that protects your privacy against intrusive web trackers.

**Always verify domain names** when entering any personal data to a website. A common trick is to imitate a website you trust. Replicating a specific domain name is much more difficult.

**Use strong passwords** for all of your online accounts. Ideally, generate one using a secure password generator in your password manager.

**Never click on suspicious links, banners or pop-ups.** Obvious, but critical. Never click anything that you don't trust completely.

**Never re-use the same password.** Only use unique passwords for all your logins. If one of your accounts gets compromised, your data will remain secure.

**Enable two-factor authentication wherever available.** It adds an additional layer of security to your online accounts and makes them harder to break into.

**Verify the identity** of anyone who is asking for your personal information. If a bank reaches out to you and asks for your details, drop the call and call the official number to verify if it was really them.

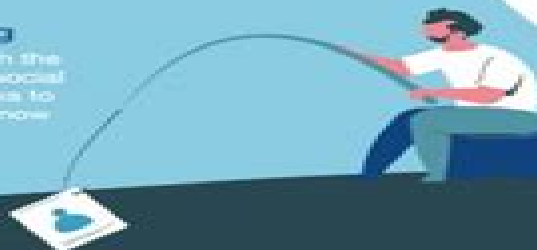

**Limit all app permissions and website tracking** to absolute minimum. Maybe your calendar app doesn't really need to access your camera after all?

**Set a time in the calendar for security checkups.** Allocate time to periodically update passwords, unsubscribe from spam, delete unused apps and browser extensions - prevention is key.

**Beware of phishing scams.** Get familiar with the ways that scammers use social engineering and other tricks to scam people. When you know how the trick works, it's much easier to avoid it.

**Educate yourself.** Make an effort to read more about privacy and security to ensure you know how to stay safe and how to avoid unnecessary risks online.

Shandilya, Soon Ae

Chun, Smita Shandilya, 2022-09-01 Internet of Things IoT security deals with safeguarding the devices and communications of IoT systems by implementing protective measures and avoiding procedures which can lead to intrusions and attacks. However security was never the prime focus during the development of the IoT hence vendors have sold IoT solutions without thorough preventive measures. The idea of incorporating networking appliances in IoT systems is relatively new and hence IoT security has not always been considered in the product design. To improve security an IoT device that needs to be directly

accessible over the Internet should be segmented into its own network and have general network access restricted The network segment should be monitored to identify potential anomalous traffic and action should be taken if a problem arises This has generated an altogether new area of research which seeks possible solutions for securing the devices and communication amongst them
