framework It covers the fundamental topics in the dynamics and control of these flight vehicles highlighting shared points as
well as differences in dynamics and control issues making use of the systems level viewpoint The book begins with the
derivation of the equations of motion for a general rigid body and then delineates the differences between the dynamics of
various flight vehicles in a fundamental way It then focuses on the dynamic equations with application to these various flight
vehicles concentrating more on aircraft and spacecraft cases Then the control systems analysis and design is carried out both
from transfer function classical control as well as modern state space control points of view Illustrative examples of
application to atmospheric and space vehicles are presented emphasizing the systems level viewpoint of control design Key
features Provides a comprehensive treatment of dynamics and control of various flight vehicles in a single volume Contains
