Hydrologie Continentale Géographie:

Observation des surfaces continentales par télédétection II Nicolas Baghdadi, Mehrez Zribi, 2016-12-01 Les réservoirs hydrologiques continentaux jouent un rôle essentiel pour la vie sur Terre. Cependant, le cycle hydrologique continental reste l'une des composantes les moins bien connues du système climatique. Cet ouvrage présente les principales applications de la télédétection pour l'hydrologie continentale. Après avoir étudié la caractérisation des états des surfaces continentales par télédétection active et passive, il aborde l'application de l'observation spatiale dans le suivi des eaux de surface et des eaux souterraines, suivi de l'Antarctique par altimétrie radar, caractérisation des redistributions de masse d'eau par la mission GRACE, potentiel de la technique GNSS-R en hydrologie, L'assimilation des mesures et produits de télédétection dans les modèles de fonctionnement de différents processus liés au cycle de l'eau est également détaillé. *Hydrologie continentale* Claude Cosandey, Mark Robinson (géographe.), 2012 Au cœur des problématiques environnementales, l'eau est une ressource parfois très rare dont les besoins sont en constante augmentation face à l'accroissement de la population mondiale et de son niveau de vie. Comment prévoir la surabondance de l'eau en période de crues ou d'inondations ? Crues rapides comme celles qui résultent de deux ou trois jours d'averses convectives ou crues lentes résultant d'une année ou plus de précipitations plus abondantes que d'ordinaire dans le cas de la Somme ou de la Seine ? Comment assurer la qualité de l'eau potable et minimiser les risques de pollution des nappes sans connaître les processus d'infiltration de l'eau dans le sol ? Comment estimer les effets d'un reboisement sur les ressources en eau si l'on ne tient pas compte des processus d'interception de l'eau par la végétation ? Fondé sur une approche essentiellement naturaliste, ce manuel permet de comprendre et de quantifier le cheminement de l'eau de son apport au sol sous forme de précipitations, son retour dans l'atmosphère par évaporation, gazeux par le processus d'évaporation. Cette connaissance indispensable permet de prévenir et de gérer les risques pouvant résulter des aménagements humains. Cet ouvrage de référence qui porte principalement sur les milieux tempérés est destiné aux étudiants de géographie et de géologie de surface et plus largement l'ensemble des acteurs de l'environnement. Claude COSANDEY est géographe directrice de recherches maitre au CNRS. Mark ROBINSON est Principal Scientific Officer au Centre pour l'écologie et l'hydrologie de Wallingford. Ses travaux portent sur l'hydrologie forestière, le drainage et l'évolution long terme des bassins versants. **Les eaux terrestres** Jean Loup, 1974-01-01 *Éléments d'hydrologie continentale* René Frécaut, 1964 *LE CYCLE DE L'EAU* AGNES.. cipitations continentales qui sont cruciales pour l'agriculture d'autant plus dans certaines régions d'extrême exposition la s

 contre partie des prélèvements en eau non négligeables dans les fleuves ou les nappes Il est donc légitime de se poser la
 question en quoi l'irrigation peut-elle avoir un impact sur les bilans d'eau continentaux L'irrigation représente-elle un élément
 perturbateur inhibiteur ou favorisant dans le cycle de l'eau Quels peuvent être les effets de cette action anthropique sur le
 climat notamment au niveau des grands plans d'irrigation que sont le bassin du Mississippi l'Inde ou encore la Chine La mod
 lisation climatique nous a permis d'apporter quelques éléments de réponse quant à l'effet de l'irrigation sur les bilans d'eau Tout
 d'abord nous avons testé la capacité du modèle de surface SECHIBA à simuler les deux composantes majeures du cycle de l'eau
 susceptibles d'être impactées par l'irrigation : l'humidité des sols et le débit des rivières Pour cela nous avons utilisé un jeu de donn
 ées atmosphériques haute résolution sur les États-Unis pour forcer notre modèle Une étude de sensibilité des paramètres de v

 tation du modèle sur l'humidité des sols a notamment permis de montrer l'effet majeur de l'extraction de l'eau par les racines
 simulée par SECHIBA De plus la comparaison avec des observations de terrain en Illinois a montré la bonne représentation des
 variations saisonnières de l'humidité des sols sur trois ans La seconde étude a porté en détail sur le fonctionnement du module de
 routage de l'eau via les fleuves vers l'océan dans le modèle SECHIBA Nous avons montré la nécessité du changement du pas de
 temps de routage lorsque l'on force le modèle haute résolution sur le bassin du Mississippi et sur ses sous-bassins Enfin un
 calcul réaliste de la demande en irrigation simulée par SECHIBA a été mis en œuvre et testé Le couplage du modèle de surface avec
 le GCM LMDZ a permis la prise en compte des rétroactions s'effectuant entre la surface continentale et l'atmosphère Les diff

 irrigation sur le bilan d'eau peut être différent selon les régions du globe L'irrigation contribue significativement à
 l'augmentation des précipitations sur la région sèche de ce bassin alors que la région humide ne présente pas de variations dans
 le bilan d'eau En revanche les résultats sur l'Inde indiquent que l'irrigation affaiblit significativement le déclenchement de la
