although this is now beginning to change with material culture recently emerging as a topic in its own right within the social sciences Carl Knappett seeks to contribute to this emergent field by adopting a wide ranging interdisciplinary approach that is rooted in archaeology and integrates anthropology sociology art history semiotics psychology and cognitive science His thesis is that humans both act and think through material culture ways of knowing and ways of doing are ingrained within even the most mundane of objects This requires that we adopt a relational perspective on material artifacts and human agents as a means of characterizing their complex interdependencies In order to illustrate the networks of meaning that result Knappett discusses examples ranging from prehistoric Aegean ceramics to Zande hunting nets and contemporary art Thinking Through Material Culture argues that although material culture forms the bedrock of archaeology the discipline has barely begun to address how fundamental artifacts are to human cognition and perception This idea of codependency among mind action and matter opens the way for a novel and dynamic approach to all of material culture both past and present
