Psychological Issues in Eyewitness Identification Siegfried L. Sporer, Roy S. Malpass, Guenter Koehnken, 2014-06-03

Why do police officers investigators prosecutors judges and others with an interest in eliciting accurate memory based testimony need to inform themselves of the research literature in experimental psychology that addresses the question of witness memory The answer is straightforward from the perspective of a simple cost benefit analysis As with so many matters in the administration of public funds effectiveness holds important rewards Those who investigate crimes and decide which line of investigation to pursue and which line to postpone or set aside necessarily make judgments about the likely guilt of suspects based on the information at hand If they can make these judgments with a high degree of accuracy everyone benefits For many cases eyewitness identification is an important component of evidence prosecution and plea negotiation If witness identification is correctly implemented investigators and prosecutors can make their judgments effectively and focus

their resources more efficiently A major component of effectiveness requires avoiding expending scarce resources on erroneous prosecutions It is in everyone's interest to make the best use of the memory of witnesses to preserve it without changing it to render it maximally accessible to provide an environment in which witnesses feel free to report their recollections and to accurately assess the probable validity of the witness's report regardless of the witness's certainty or doubts about its accuracy This volume gathers evidence from various research domains on eyewitness testimony Although many of the studies discussed deal with eyewitness identification it is noteworthy that many of them also touch upon other areas of concern to eyewitness researchers including chapters on voice recognition by humans and computers with particularly detailed instructions on conducting voice lineup differential aspects of recognition memory in children elderly eyewitness memory problems of cross racial identification psychological aspects of facial image reconstruction techniques person descriptions particular benefits of reinstating context as a means to improve eyewitness memory problems associated with various research paradigms in the eyewitness arena and recommendations on how to conduct lineups and photospreads and their proper evaluation Differentiated from other literature on this topic by its non technical language and accessibility to non professionals this volume covers a great deal of ground raises a host of questions settles some others and points the way to more effective use and evaluation of what eyewitnesses have to say
