Holistic Impact Challenge (ETHIC): A New Environmental and Climatic Era George Cristian Lazaroiu, Mariacristina Roscia, Vasile Sebastian Dancu, 2024-11-12 This book states that the new environmental challenge will also have to be faced ethically science can provide the tools but people will have to be sensitized so that they make their own environmental ethics The challenge of the new era is the environment and therefore the climate as it does not start outside of us but as a constituent element of our life and therefore lived ethically The new vision proposed in this book is to push technology together with the human being in assuming environmentally ethical behaviors this is the greatest collective action of humanity Sustainable development has allowed an integrated key to the social economic and environmental dimensions Through ethics sustainability can be combined not only by referring to the problem of pollution and the exploitation of natural resources but it creates a new global era that includes all dimensions of people s lives and of society The shared and structured environmental ethics allow an approach that is no longer short term but provide the collective tools to look far in time With this book we want to lay the instrumental technical social and legislative foundations to provide a new methodology for the care of the environment as up to now there has been much discussion but little achieved in a truly ethical way **Safety of Transformers, Reactors Power Supply Units and Combinations Thereof** Standards Australia (Organization), 2012 **12. Suh, Dong Ho Cho, 2017-04-04 This book details the design and technology of the on line electric vehicle OLEV system and its enabling wireless power transfer technology the shaped magnetic field in resonance SMFIR The text shows how OLEV

systems can achieve their three linked important goals reduction of CO₂ produced by ground transportation improved energy efficiency of ground transportation and contribution to the amelioration or prevention of climate change and global warming SMFIR provides power to the OLEV by wireless transmission from underground cables using an alternating magnetic field and the reader learns how this is done This cable network will in future be part of any local smart grid for energy supply and use thereby exploiting local and renewable energy generation to further its aims In addition to the technical details involved with design and realization of a fleet of vehicles combined with extensive subsurface charging infrastructure practical issues such as those involved with pedestrian safety are considered Furthermore the benefits of reductions in harmful emissions without recourse to large banks of batteries are made apparent Importantly the use of Professor Suh s axiomatic design paradigm enables such a complicated transportation system to be developed at reasonable cost and delivered on time The book covers both the detailed design and the relevant systems engineering knowledge and draws on experience gained in the successful implementation of OLEV systems in four Korean cities The introduction to axiomatic design and the in depth discussion of system and technology development provided by The On line Electric Vehicle is instructive to graduate students in electrical mechanical and transportation engineering and will help engineers and designers to master the efficient timely and to cost implementation of large scale networked systems Managers responsible for the running of large transportation infrastructure projects and concerned with technology management more generally will also find much to interest them in this book
