Qingsheng Zhu,2005-10-07 This book presents the latest techniques algorithms research accomplishments and trend in computer science and engineering It collects together 222 peer reviewed papers presented at the 11th Joint International Computer Conference The theme of this year is IT Intellectual Capital for the Betterment of Human Life The articles in this book cover a wide range of active and interesting areas such as Digital Entertainment Grid Computing Embedded System Web Service and Knowledge Engineering This book serves as a good reference not only for researchers but also for graduate students in corresponding fields The proceedings have been selected for coverage in Index to Scientific Technical Proceedings ISTP CDROM version ISI Proceedings CC Proceedings Engineering Physical Sciences *Computer Literature Bibliography: 1964-1967* W. W. Youden,1965 **Australian Computer Journal** ,1996 **Environmental Systems**
Antonio S. Camara,2002 This book is about initiatives to bring environmental management engineering and science to the multimedia age Those initiatives integrate old with new methods for collecting storing modelling representing and making available environmental information on the Internet On the World Wide Web environmental information is increasingly multidimensional It includes text audio graphics photographs and video data types As a result environmental monitoring information systems design and modelling activities are changing dramatically Monitoring experts are becoming familiar with image and sound acquisition and processing tools Environmental multidimensional data are part of the Internet based information infrastructures which are being developed at regional national and international levels The wealth of multimedia information is facilitating the creation of a new generation of environmental models using techniques originally developed for other areas such as the entertainment industry This is a compact presentation of methods to handle multidimensional environmental information The book combines the introduction of fundamental concepts with guidance to related and expanded views these views are detailed in a comprehensive list of Web links periodically updated at the book s web site and a bibliography **Introduction to Parallel Processing** Behrooz Parhami,2006-04-11 THE CONTEXT OF PARALLEL PROCESSING The field of digital computer architecture has grown explosively in the past two decades Through a steady stream of experimental research tool building efforts and theoretical studies the design of an instruction set architecture once considered an art has been transformed into one of the most quantitative branches of computer technology At the same time better understanding of various forms of concurrency from standard pipelining to massive parallelism and invention of architectural structures to support a reasonably efficient and user friendly programming model for such systems has allowed hardware performance to continue its exponential growth This trend is expected to continue in the near future This explosive growth linked with the expectation that performance will continue its exponential rise with each new generation of hardware and that in stark contrast to software computer hardware will function correctly as soon as it comes off the assembly line has

its down side It has led to unprecedented hardware complexity and almost intolerable development costs The challenge facing current and future computer designers is to institute simplicity where we now have complexity to use fundamental theories being developed in this area to gain performance and ease of use benefits from simpler circuits to understand the interplay between technological capabilities and limitations on the one hand and design decisions based on user and application requirements on the other
