Gene Interaction

WORKING WITH THE FIGURES

1. In Figure 6-1,

- what do the yellow stars represent?
- explain in your own words why the heterozygote is functionally wild type.

Answer:

- Yellow stars represent mutations in the gene.
- Heterozygous is a functional genotype because there is a sufficient amount of a gene product from the second (wild type) gene on the second chromosome, which does not have a mutation.

2. In Figure 6-2, explain how the mutant polypeptide acts as a spoiler and what its net effect on phenotype is.

Answer: Consider the lower-right-hand panel in this figure: In the heterozygote, the mutant protein imposes its shape on the wild-type protein resulting in nonfunction.

3. In Figure 6-6, assess the allele I^d : is it dominant? recessive? codominant? incompletely dominant?

Answer: Allele I^d which produces solid white patterns in a clover leaf, appears codominant with I^{dm} and I^h , but it is dominant to the other alleles.

4. In Figure 6-11,

- in view of the position of HPA oxidase earlier in the pathway compared to that of HA oxidase, would you expect people with tyrosinosis to show symptoms of alkaptonuria?
- if a double mutant could be found, would you expect tyrosinosis to be epistatic to alkaptonuria?
