Low-cost, polymerase chain reaction (PCR)-based methods have been developed to detect the presence of *S. aureus* in dairy products. PCR is a sensitive and specific method for detecting the presence of a specific DNA sequence. It has been used to detect the presence of *S. aureus* in dairy products, including milk, cheese, and yogurt. PCR can be used to detect the presence of *S. aureus* in dairy products at a very early stage, before the bacteria have had a chance to multiply and cause illness. This is important because *S. aureus* can cause a range of illnesses, including food poisoning, skin infections, and more serious conditions. PCR is a rapid and reliable method for detecting the presence of *S. aureus* in dairy products, and it can be used to monitor the safety of the food supply.
