Intelligence Is Not Artificial:

Intelligence Is Not Artificial Piero Scaruffi, 2014-12-22 Writers inventors and entrepreneurs impressed by progress in several scientific fields are debating whether we may be heading for a singularity in which machines with super human intelligence will arise and multiply In parallel enthusiastic coverage in the media has widely publicized machines performing sophisticated tasks from beating the world's chess champion to driving a car from recognizing animals in videos to beating human experts on quiz shows These stories have reignited interest in the discipline of Artificial Intelligence whose goal is to create machines that are as intelligent as humans First of all this book provides a reality check of sorts on simulating human intelligence and achieving superhuman intelligence I show that in a society driven by media that desperately need sensational news to make money and in an academic world increasingly driven by the desire to turn research into Silicon Valley start ups technological progress in general and progress in computer science in particular is often overrated I wanted to dispel some notions and my version of the facts may sound controversial until you read my explanations For example non human intelligence is already among us and is multiplying rapidly but it is not a machine For example progress in Artificial Intelligence has been negligible and one reason is ironically that computers have become so much more powerful For example the program of turning machines into humans is not very successful yet but the program of turning humans into machines via an almost infinite repertory of rules and regulations is very successful The new generations missed the debates of the previous decades the Turing test the ghost in the machine the Chinese room etc and some of us think that these new generations trained in hyper specialized disciplines don't have the knowledge to understand them even if they were forced to read them Therefore it is much easier for the new AI practitioners to impress the new generations I have summarized the various philosophical arguments in favor of and against the feasibility of machine intelligence in my book *The Nature of Consciousness* and I won't repeat them here I will however at least caution the new generations that I grew up as far as cognitive science goes at a time when the term intelligence was not cool at all too vague too unscientific too abused in popular literature to lend itself to scientific investigation In fact the mother of all problems in this debate is at the very source singularity and superhuman intelligence are non scientific terms based on non scientific chatting The term intelligence itself is hardly scientific Ask one hundred psychologists and you will get one hundred different definitions Ask philosophers and you will get thick tomes written in a cryptic language Ask neurobiologists and they may simply ignore you I also feel that this discussion should be complemented with an important more important discussion about the changes in human intelligence due to the increased intelligence of machines This change in human intelligence may have a stronger impact on the future of human civilization than the improvements in machine intelligence Finally I am intrigued by another sociological anthropological aspect of this discussion humans seem to have a genetic propensity to believe in higher forms of intelligence gods saints UFOs and the myth of the Singularity could simply be its manifestation in our post religious 21st

century *Intelligence Is Not Artificial* Piero Scaruffi, 2018-05 This book provides a detailed history of Artificial Intelligence and a reality check Themes explored in this book include Most of the intelligence of our machines is due to the environment that humans structure for them We are building vast algorithmic bureaucracies all around us Automation is an effect not a cause The danger is not that machines will become as intelligent as us but that we will become as dumb as them the Turing Test in reverse We have always coexisted with super human or better non human intelligence The Singularity is simply a religion for the godless 21st century

Probably Approximately Correct Leslie Valiant, 2013-06-04 From a leading computer scientist a unifying theory that will revolutionize our understanding of how life evolves and learns How does life prosper in a complex and erratic world While we know that nature follows patterns such as the law of gravity our everyday lives are beyond what known science can predict We nevertheless muddle through even in the absence of theories of how to act But how do we do it In *Probably Approximately Correct* computer scientist Leslie Valiant presents a masterful synthesis of learning and evolution to show how both individually and collectively we not only survive but prosper in a world as complex as our own The key is probably approximately correct algorithms a concept Valiant developed to explain how effective behavior can be learned The model shows that pragmatically coping with a problem can provide a satisfactory solution in the absence of any theory of the problem After all finding a mate does not require a theory of mating Valiant's theory reveals the shared computational nature of evolution and learning and sheds light on perennial questions such as nature versus nurture and the limits of artificial intelligence Offering a powerful and elegant model that encompasses life's complexity *Probably Approximately Correct* has profound implications for how we think about behavior cognition biological evolution and the possibilities and limits of human and machine intelligence

These challenges escalate rapidly fuelled by technological advancements and economic uncertainties that we face on a global scale. Disinformation and misinformation stand out as critical global threats. The pressing issues of cybersecurity, geopolitical tensions, unequal opportunities, inflation, forced migration, economic downturns and environmental degradation present urgent risks that demand immediate attention. The imbalances and inequalities in wealth and resource distribution at all levels breed instability locally, regionally and globally, further amplifying the fragility and volatility of our global system. Beyond the immediate crises, our book delves into the potential repercussions of artificial intelligence and its implications for the geopolitical supply chain in Türkiye. It meticulously unveils how climate change and geopolitical dynamics could severely impact Türkiye's security framework, economic landscape and business sector. In this context, Türkiye must boldly declare its commitment to fostering collaboration among nations, businesses and civil society to effectively address these global challenges. Türkiye's pivotal role in this collective endeavour cannot be overstated and the country should continue to lead initiatives aimed at collaboration and problem solving. This book offers valuable insights from scholars, experts and industry leaders with the goal of elevating awareness and effectively managing emerging risks at every level. Together we can navigate these turbulent times and create a more resilient global order.
