Intensive Agriculture And Sustainability:

Intensive Agriculture and Sustainability Glen C. Filson, 2005-07 As globalization restructures agriculture and rural communities the impacts of increasingly industrialized farming make interdisciplinary analyses of the linkages among the social environmental and economic aspects of farming ever more vital This collection analyzes the reasons for the public scrutiny of intensive agriculture and the prospects for sustainable farming now that concerns are mounting about food quality manure runoff greenhouse gases extra label use of antibiotics pesticide use and rural conflict *Intensive Agriculture and Sustainability* outlines the advantages of Farming Systems Analysis for understanding the implications of modern intensive agriculture This book describes some of the major environmental and social problems connected with intensive farming outlines a framework for analyzing its sustainability discusses key linkages among the environmental economic and social indicators outlines modelling trade offs between profitability and environmental sustainability and then analyzes various farming systems using case studies The authors conclude that rural conflict and government regulation are likely to continue unless the public joins with farmers to help fund stewardship practices and stabilize farm incomes This book will appeal to field practitioners agricultural and environmental policy analysts geographers and those scholars and students who are tired of the pervasive production oriented disciplinary focus that typifies most agricultural research **Sustainable**

Agriculture in the American Midwest Gregory McIsaac, William R. Edwards, 1994 This timely collection provides a general overview and detailed discussion of social and technical issues related to moving toward a culture and practice of sustainable agriculture in the American Midwest It develops the concept that because agriculture does not exist in isolation sustainability must be understood within the context of the many dynamic natural and social systems characteristic of a particular region from climate to culture Scholars from diverse disciplines ecology geography economics agricultural engineering anthropology entomology climatology provide the historical and contemporary context for this vital discussion

Sustainable Agricultural Chemistry in the 21st Century William Nelson, 2023-05-31 Agriculture is one of the oldest and most global human enterprises and as the world struggles with sustainable practices and policies agricultural chemistry has a clear role to play This book highlights the ways in which science in agriculture is helping to achieve global sustainability in the twenty first century and demonstrates that this science can and should be a leading contributor in discussions on environmental science and chemistry The four drivers of this subject are presented those being economic environmental regulatory and scientific and help showcase agricultural chemistry as a dynamic subject that is contributing to this necessity of global sustainability in the twenty first century Features Explains the necessary role of agricultural chemistry in the sustainability of the world in the 21st century Recognizes past practices and future potential guided by global demand and the four drivers economic scientific regulatory and environmental Presents a much needed multi dimensional approach to the subject Demonstrates that agricultural chemistries can and should be leading contributors in discussion on environmental

science and chemistry Highlights new products processes applications and developments in green chemistry which demonstrates how agriculture is adapting in the new age *Smallholders, Householders* Robert McC. Netting,1993

Contrasting the prevailing theories of the evolution of agriculture the author argues that the practice of smallholding is more efficient and less environmentally degrading than that of industrial agriculture which depends heavily on fossil fuel chemical fertilizers pesticides and herbicides He presents a convincing case for his argument with examples taken from Africa Asia Europe and the Americas and demonstrates that there are fundamental commonalities among smallholder cultures

Smallholders Householders is a detailed and innovative analysis of the agricultural efficiency and conservation of resources practiced around the world by smallholders *The pursuit of sustainable agriculture in EU free trade agreements* Luchino Ferraris,2023-09-14 This book explores the extent to which EU Free Trade Agreements FTAs pursue sustainable agriculture in third country parties It contends that this should be part of a duty for the EU enshrined in the Treaties to promote its fundamental values in its external action It suggests that the extent to which this occurs in practice may be reviewed judicially by the Court of Justice of the European Union Against this background selected agreements concluded by the EU with developed and developing countries Canada South Korea Ukraine Chile SADC countries and Vietnam are taken as case studies The author concludes that in spite of the remarkable progress made hitherto EU trade policy is still far from being in line with the increasingly strong commitment of the EU to take the lead in the international arena for environmental and climate matters This work adopts primarily a legal methodology but it broaches the subject in interdisciplinary terms It is addressed not only to EU policy makers but also to scholars of different fields and to the wider public interested in topics that have become of common concern for the future of our planet With a foreword by Daniel Calleja Crespo Director General of the European Commission DG Environment Water and Agricultural Sustainability Strategies Manjit S Kang,2010-03-25

According to the United Nations 77 million people are expected to face water shortage by 2025 if people continue to use water at the current rate More water than available would be needed to grow the worlds food during the next decade As a result of scarcity of water global annual food production losses could reach 350 million tons by 2025 Di Intensive Agriculture and Environmental Quality Tracy Irwin Hewitt,Katie Smith,1995

Ecological Intensification of Natural Resources for Sustainable Agriculture Manoj Kumar Jhariya,Ram Swaroop Meena,Arnab Banerjee,2021-03-07 Ecological intensification involves using natural resources such as land water soil nutrients and other biotic and abiotic variables in a sustainable way to achieve high performance and efficiency in agricultural yield with minimal damage to the agroecosystems With increasing food demand there is high pressure on agricultural systems The concept of ecological intensification presents the mechanisms of ensuring high agricultural productivity by restoration the soil health and landscape ecosystem services The approach involves the replacement of anthropogenic inputs with eco friendly and sustainable alternates Effective ecological intensification requires an understanding of ecosystems services ecosystem s components and flow of

resources in the agroecosystems Also awareness of land use patterns socio economic factors and needs of the farmer community plays a crucial role It is therefore essential to understand the interaction of ecosystem constituents within the extensive agricultural landscape The editors critically examined the status of ecological stress in agroecosystems and address the issue of ecological intensification for natural resources management Drawing upon research and examples from around the world the book is offering an up to date account and insight into the approaches that can be put in practice for poly cropping systems and landscape scale management to increase the stability of agricultural production systems to achieve Ecological resilience It further discusses the role of farmer communities and the importance of their awareness about the issues This book will be of interest to teachers researchers climate change scientists capacity builders and policymakers Also the book serves as additional reading material for undergraduate and graduate students of agriculture forestry ecology agronomy soil science and environmental sciences National and international agricultural scientists policymakers will also find this to be a useful read for green future

Sustainable Intensification of Organic and Low-Input Agriculture through Integrated Bioenergy Production Benjamin Blumenstein, 2017-01-01 Both global food and energy systems are increasingly faced with major challenges regarding food security and non fossil energy provision respectively Organic or low input agriculture as well as bioenergy production may contribute to securing rising food and energy needs However low input agricultural systems are challenged for their lower productivity compared to high input systems Moreover bioenergy systems are often criticized for their unsustainable high input cropping systems Consequently innovative approaches are needed to optimize both sectors A promising strategy may be the integration of organic or low input agricultural systems with agricultural bioenergy production with the objective to increase both productivity and sustainability of land use systems This dissertation examines the opportunities and risks of integrated bioenergy production in organic and low input agricultural systems based on the example of two bioenergy technologies anaerobic digestion AD and integrated generation of solid fuel and biogas from biomass IFBB by assessment of their structural framework conditions systematic implications as well as economic and risk performance In a final step the role of integrated agricultural bioenergy production within the context of the so called sustainable intensification is debated

Sustainable Agriculture in Temperate Zones Charles A. Francis, Cornelia Butler Flora, Larry D. King, 1991-01-16 This timely work reviews the best current thinking on practicing sustainable agriculture with contributions from agricultural biological environmental and social scientists The emphasis is on temperate zones with many of the contributions addressing U S agriculture However the principles explored here have application in any climatic or geographical region The book discusses stewardship biodiversity reliance on mixed food systems and other approaches always with a view toward reducing environmental degradation maintaining economic viability and stabilizing rural communities
