

ADAPTATIONS AND NATURAL SELECTION

Objective:

Simulate changes in moth population due to pollution and predation and observe how species can change over time.

Introduction:

Charles Darwin accumulated a tremendous collection of facts to support the theory of evolution by natural selection. One of his difficulties in demonstrating the theory, however, was the lack of an example of evolution over a short period of time, which could be observed as it was taking place in nature. Although Darwin was unaware of it, remarkable examples of evolution, which might have helped to persuade people of his theory, were in the countryside of his native England. One such example is the evolution of the peppered moth, *Biston betularia*.

The economic changes known as the industrial revolution began in the middle of the eighteenth century. Since then, tons of soot have been deposited on the countryside around industrial areas. The soot discolored and generally darkened the surfaces of trees and rocks. In 1848, a dark-colored moth was first recorded. Today, in some areas, 90% or more of the peppered moths are dark in color. More than 70 species of moth in England have undergone $\frac{1}{2}$ change from light to dark. Similar observations have been made in other industrial nations, including the United States.

Run two simulations for 1 minute each, one with a light forest and one with a dark forest. You will play the part of a blue jay that eats moths. Repeat the simulations 2 more times (for a total of 6 simulations).

Nature's Yearly Cycle Sierra Layne,AI,2025-02-17 Nature s Yearly Cycle explores the profound impact of seasonal changes on our planet s biodiversity and ecological resilience These cyclical patterns driven by Earth s orbit are not just scenic but are critical drivers of biological processes You ll discover how seasonal niches support a greater variety of species and how organisms adapt to fluctuating conditions For example some plants flower in spring to take advantage of increased sunlight while certain animals hibernate to conserve energy during the winter The book examines specific cases of species adaptation and culminates by assessing the implications of seasonal dynamics for ecosystem resilience It reveals how these dynamics prepare ecosystems for larger challenges offering a holistic view of seasonal ecology The book progresses by first introducing the fundamental concepts of seasonal drivers and ecological responses followed by examining specific cases of species adaptation **The Natural History of Moths** Mark Young,2010-06-30 The Natural History of Moths covers all aspects of moth biology and ecology Moths are often as beautiful as butterflies and with more than 2 000 species on the British list they are more numerous more diverse and occupy a far wider variety of habitats and lifestyles Yet for most naturalists they remain a little known and neglected group Not since E B Ford s 1955 New Naturalist volume has the biology of moths been treated in a popular book Here Mark Young sets out to redress this imbalance and to show the great variety and interest of these sometimes striking sometimes subtle insects He draws together the results of amateur study and the latest scientific research to paint a broad picture of all aspects of moth biology brought to life with many fascinating examples from the moth faunas of Britain and abroad The breeding feeding distribution and life history ecology of moths are described in addition to more specialised aspects of their biology such as pheromone attraction of mates interactions with host plants and the anti predator responses that many moths use to foil bats and birds While butterfly conservation problems have often provided headline news in the press the difficulties facing moths have received much less attention However threats arising from the loss and degradation of natural habitats have had no less effect on moths and have endangered many more species The status and fortunes of many moths are still unknown but a growing number of success stories such as that of the Black veined Moth point the way to better practice for the future and to the preservation of this enormous wealth of beauty diversity and natural history interest CBSE Class XII Science (Biology) Study Notes | Concise Handbook for Class 12 EduGorilla Prep Experts, Insect Physiology (21st Century Biology and Agriculture: Textbook Series) K.P.
