Suicidal behavior and depression among perinatal women: Research, Prevention, Intervention and Treatment Yari Gvion, Sami Hamdan, Vita Poštuvan, 2024-10-01 Suicide is a multifaceted

phenomenon with numerous contributing and facilitating factors and variables. Despite motherhood serving as a potential protective factor against suicidal tendencies, a notable prevalence of suicidality persists among pregnant and postpartum women, making suicide a leading cause of death among women with postpartum depression (PDD). Furthermore, numerous women experience emotional challenges during pregnancy which often persist into the postpartum phase, thus making them also susceptible to depression and suicidality. This Research Topic is dedicated to studies exploring various approaches to suicidal behavior, depression, as well as of non-suicidal self-injury (NSSI) among pregnant and postpartum women. The purpose of this Research Topic is to elucidate comprehensive analyses of extant knowledge and empirical data about models, theories, and specific dimensions and variables that may help us increase the understanding of suicidal phenomena among perinatal women, pregnant and postpartum. The specific goal is to identify characteristics that may be used to develop prevention and intervention methods among this at-risk population.

The Oxford Handbook of Treatment Processes and Outcomes in Psychology Sara Maltzman, 2016-06-15. The Oxford Handbook of Treatment Processes and Outcomes in Psychology presents a multidisciplinary approach to a biopsychosocial translational model of psychological treatment across the lifespan. It describes cutting-edge research across developmental, clinical, counseling, and school psychology, social work, neuroscience, and psychopharmacology. The Handbook emphasizes the development of individual differences in resilience and mental health concerns, including social, environmental, and epigenetic influences across the lifespan, particularly during childhood. Authors offer detailed discussions that expand on areas of research and practice that already have a substantive research base, such as self-regulation, resilience, defining evidence-based treatment, and describing client-related variables that influence treatment processes. Chapters in newer areas of research are also included, e.g., neuroimaging, medications as adjuncts to psychological treatment, and the placebo effect. Additionally, authors address treatment outcomes, such as evaluating therapist effectiveness, assessing outcomes from different perspectives, and determining the length of treatment necessary to attain clinical improvement. The Handbook provides an entrance to the research, as well as hands-on guidance and suggestions for practice and oversight, making it a valuable resource for graduate students, practitioners, researchers, and agencies alike.

Slope Stability and Erosion Control: Ecotechnological Solutions Joanne E. Norris, Alexia Stokes, Slobodan B. Mickovski, Erik Cammeraat, Rens van Beek, Bruce C. Nicoll, Alexis Achim, 2008-02-29. This chapter describes the processes involved in the transport of material over hillslopes. Hillslopes provide the gradients enabling material to be transported from the slopes themselves towards the valley bottoms, directly by gravity alone or by water flowing down over the surface. Gravity has the potential to transfer material downslope if the material resistance to counteract it is insufficient. Similarly, water and wind flowing along the surface exert a drag on soil particles and have the potential to entrain material. After the gradient has fallen below a critical threshold to keep the material in transport, deposition occurs. Conventionally, slope processes in which gravity alone is the dominant transporting agent are called mass movements.

Brunsden 1984 Processes in which other agents dominate are called erosion e g wind or water erosion Flowing water is an important transporting agent on which the emphasis is placed here Although mass wasting is a natural process its incidence and impact may be exacerbated by human activities Crozier 1986 Morgan 2005 A situation may ultimately arise in which human interests become unsafe or unsustainable This impact is not only directly felt in the areas where material is removed or deposited and indirectly mass wasting may have an effect on soil and water quality in areas located further downstream In the following sections a brief overview is given of the mechanisms morphology causes and consequences of mass movements and erosion
