The Schenley Experiment Jake Oresick, 2017-04-14 The Schenley Experiment is the story of Pittsburgh's first public high school a social incubator in a largely segregated city that was highly even improbably successful throughout its 156 year existence Established in 1855 as Central High School and reorganized in 1916 Schenley High School was a model of innovative public education and an ongoing experiment in diversity Its graduates include Andy Warhol actor Bill Nunn and jazz virtuoso Earl Hines and its prestigious academic program and pensions lured such teachers as future Pulitzer Prize winner Willa Cather The subject of investment as well as destructive neglect the school reflects the history of the city of Pittsburgh and provides a study in both the best and worst of urban public education practices there and across the Rust Belt Integrated decades before Brown v Board of Education Schenley succumbed to default segregation during the white flight of the 1970s it rose again to prominence in the late 1980s when parents camped out in six day long lines to enroll their children in visionary superintendent Richard C Wallace's reinvigorated school Although the historic triangular building was a cornerstone of its North Oakland neighborhood and a showpiece for the city of Pittsburgh officials closed the school in 2008 citing over 50 million in necessary renovations a controversial event that captured national attention Schenley alumnus Jake Oresick tells this story through interviews historical documents and hundreds of first person accounts drawn from a community indelibly tied to the school A memorable important work of local and educational history his book is a case study of desegregation magnet education and the changing nature and legacies of America's oldest public schools

North Carolina beyond the Connected Age Michael L. Walden, 2017-08-31 For years North Carolina has been one of the nation's fastest growing states bringing tremendous change to the state's people industries jobs places environment and government Much of this change resulted from the information and technology revolution which connected the state more fully to the country and the world But we are now moving beyond the connected age argues Michael L Walden to a new era of living production and work and North Carolina faces not only unanswered questions about the past but also new challenges and opportunities visible on the horizon What will these new transformations mean for the state's people places and prosperity In this book Walden lays out these looming economic issues and offers predictions of future trends as well as multiple policy options for taxation infrastructure and environmental issues While the future cannot be perfectly predicted Walden's expert analysis is mandatory reading for policy makers business leaders and everyday people seeking to prepare for upcoming changes in North Carolina's economy

Medial/Skeletal Linking Structures for Multi-Region Configurations James Damon, Ellen Gasparovic, 2018-01-16 The authors consider a generic configuration of regions consisting of a collection of distinct compact regions in which may be either regions with smooth boundaries disjoint from the others or regions which meet on their piecewise smooth boundaries in a generic way They introduce a skeletal linking structure for the collection of regions which simultaneously captures the regions individual shapes and geometric properties as well as the positional

geometry of the collection The linking structure extends in a minimal way the individual skeletal structures on each of the regions This allows the authors to significantly extend the mathematical methods introduced for single regions to the configuration of regions

[Algebras of Singular Integral Operators with Kernels Controlled by Multiple Norms](#) Alexander Nagel, Fulvio Ricci, Elias M. Stein, Stephen Wainger, 2019-01-08 The authors study algebras of singular integral operators on $\mathbb{R}$ and nilpotent Lie groups that arise when considering the composition of Calderón Zygmund operators with different homogeneities such as operators occurring in sub elliptic problems and those arising in elliptic problems These algebras are characterized in a number of different but equivalent ways in terms of kernel estimates and cancellation conditions in terms of estimates of the symbol and in terms of decompositions into dyadic sums of dilates of bump functions The resulting operators are pseudo local and bounded on L^p for $1 < p < \infty$ While the usual class of Calderón Zygmund operators is invariant under a one parameter family of dilations the operators studied here fall outside this class and reflect a multi parameter structure

Exotic Cluster Structures on SL_n : The Cremmer-Gervais Case M. Gekhtman, M. Shapiro, A. Vainshtein, 2017-02-20 This is the second paper in the series of papers dedicated to the study of natural cluster structures in the rings of regular functions on simple complex Lie groups and Poisson Lie structures compatible with these cluster structures According to our main conjecture each class in the Belavin Drinfeld classification of Poisson Lie structures corresponds to a cluster structure in The authors have shown before that this conjecture holds for any in the case of the standard Poisson Lie structure and for all Belavin Drinfeld classes in In this paper the authors establish it for the Cremmer Gervais Poisson Lie structure on which is the least similar to the standard one

The Nonsense Factory Bruce Cannon Gibney, 2019-05-14 A withering and witty examination of how the American legal system burdened by complexity and untrammelled growth fails Americans and threatens the rule of law itself by the acclaimed author of *A Generation of Sociopaths* Our trial courts conduct hardly any trials our correctional systems do not correct and the rise of mandated arbitration has ushered in a shadowy system of privatized justice Meanwhile our legislators can't even follow their own rules for making rules while the rule of law mutates into a perpetual state of emergency The legal system is becoming an incomprehensible farce How did this happen In *The Nonsense Factory* Bruce Cannon Gibney shows that over the past seventy years the legal system has dangerously confused quantity with quality and might with legitimacy As the law bloats into chaos it staggers on only by excusing itself from the very commands it insists that we obey leaving Americans at the mercy of arbitrary power By examining the system as a whole Gibney shows that the tragedies often portrayed as isolated mistakes or the work of bad actors police misconduct prosecutorial overreach and the outrages of imperial presidencies are really the inevitable consequences of law's descent into lawlessness The first book to deliver a lucid comprehensive overview of the entire legal system from the grandeur of Constitutional theory to the squalid workings of Congress *The Nonsense*

Factory provides a deeply researched and witty examination of America's state of legal absurdity concluding with sensible options for reform

The Vanishing Middle Class Peter Temin, 2017-03-17 Why the United States has developed an economy divided between rich and poor and how racism helped bring this about The United States is becoming a nation of rich and poor with few families in the middle In this book MIT economist Peter Temin offers an illuminating way to look at the vanishing middle class Temin argues that American history and politics particularly slavery and its aftermath play an important part in the widening gap between rich and poor Temin employs a well known simple model of a dual economy to examine the dynamics of the rich poor divide in America and outlines ways to work toward greater equality so that America will no longer have one economy for the rich and one for the poor Many poorer Americans live in conditions resembling those of a developing country substandard education dilapidated housing and few stable employment opportunities And although almost half of black Americans are poor most poor people are not black Conservative white politicians still appeal to the racism of poor white voters to get support for policies that harm low income people as a whole casting recipients of social programs as the Other black Latino not like us Politicians also use mass incarceration as a tool to keep black and Latino Americans from participating fully in society Money goes to a vast entrenched prison system rather than to education In the dual justice system the rich pay fines and the poor go to jail

Hypercontractivity in Group von Neumann Algebras Marius Junge, Carlos Palazuelos, Javier Parcet, Mathilde Perrin, 2017-09-25 In this paper the authors provide a combinatorial numerical method to establish new hypercontractivity estimates in group von Neumann algebras They illustrate their method with free groups triangular groups and finite cyclic groups for which they obtain optimal time hypercontractive inequalities with respect to the Markov process given by the word length and with an even integer Interpolation and differentiation also yield general hypercontractivity for via logarithmic Sobolev inequalities The authors method admits further applications to other discrete groups without small loops as far as the numerical part which varies from one group to another is implemented and tested on a computer The authors also develop another combinatorial method which does not rely on computational estimates and provides non optimal hypercontractive inequalities for a larger class of groups lengths including any finitely generated group equipped with a conditionally negative word length like infinite Coxeter groups The authors second method also yields hypercontractivity bounds for groups admitting a finite dimensional proper cocycle

Hypercontractivity fails for conditionally negative lengths in groups satisfying Kazhdan's property T

The Planar Cubic Cayley Graphs Agelos Georgakopoulos, 2018-01-16 The author obtains a complete description of the planar cubic Cayley graphs providing an explicit presentation and embedding for each of them This turns out to be a rich class comprising several infinite families He obtains counterexamples to conjectures of Mohar Bonnington and Watkins The author's analysis makes the involved graphs accessible to computation corroborating a conjecture of Droms
