**Free Innovation** Eric Von Hippel, 2024-04-30 A leading innovation scholar explains the growing phenomenon and impact of free innovation in which innovations developed by consumers and given away for free In this book Eric von Hippel author of the influential Democratizing Innovation integrates new theory and research findings into the framework of a free innovation paradigm Free innovation as he defines it involves innovations developed by consumers who are self rewarded for their efforts and who give their designs away for free It is an inherently simple grassroots innovation process unencumbered by compensated transactions and intellectual property rights Free innovation is already widespread in national economies and is steadily increasing in both scale and scope Today tens of millions of consumers are collectively spending tens of billions of dollars annually on innovation development However because free innovations are developed during consumers unpaid discretionary time and are given away rather than sold their collective impact and value have until very recently been hidden from view This has caused researchers governments and firms to focus too much on the Schumpeterian idea of innovation as a producer dominated activity Free innovation has both advantages and drawbacks Because free innovators are self rewarded by such factors as personal utility learning and fun they often pioneer new areas before producers see commercial potential At the same time because they give away their innovations free innovators generally have very little incentive to invest in diffusing what they create which reduces the social value of their efforts The best solution von Hippel and his colleagues argue is a division of labor between free innovators and producers enabling each to do what they do best The result will be both increased producer profits and increased social welfare a gain for all
