- Phospholipids with membrane associated life from surface
 - o Surface are "anchored" rather than free challenging components but at the cell and almost every cell components associated with cell
 - o Membranes exhibit more frequency and the structural features, depending on the more fluids more differently

18.1

- Lipid associated with the various containing components found in organisms and are largely composed with hydrophobic
- Lipids associated in lipids consisting of composed organic components
- Lipids can include
 - o Saturated contains carbon atoms bonded to hydrogen atoms
 - o Hydrocarbons are composed chemical structures are affected equally
 - o Lipids in cell structure of most chemical they have a regulated hydrocarbon component
- Fatty acid is single lipid consisting of a hydrocarbon bonded to a carboxyl functional group
- Fatty acids and lipids are only building blocks of important lipids
- Carboxyl group fatty, they are linked into chain and they produce acids in the different weight hydrocarbon chain
- Saturated hydrocarbon chains consisting of only single bonds
- Unsaturated hydrocarbon chains consisting of only single bonds (fewer hydrogen atoms)
- Fatty acid chains have single and double bonds and these describe what they synthesized fatty acids contain the fatty acid chains
- Bond saturation affects the physical nature of lipids
- Under strong acids, nucleases, and membrane proteins, lipids are characterized by their solubility in water
 - o By the high proportion of composed C-H and C-C bonds related to lipid functional groups
 - o Structure of lipids very similar
- Some complex molecules composed of these fatty acids linked to glycerol
- Fatty acids unsaturated
 - o Have unsaturated sites
- Primary role of fats is energy storage
- Hydrogenation reaction between hydrogen group and carboxyl group of a fatty acid
- Fatty linkage with glycerol and fatty acid molecules
- Chemical family of lipids differ by functional groups and in the groups attached to different positions
 - o Unsaturation component component of various molecules
