

EMC Implementation for Open Replicator

PS-CUS-EMC

Description

The *EMC® Implementation for Open Replicator* service is a follow-on service to the *EMC Design for Storage Replication* service. All tasks associated with this service assume that the design service is complete and the design details are communicated to the Implementation Specialist.

EMC Symmetrix® Open Replicator is a Solutions Enabler-based utility for Enginuity™. It provides customers with a method to copy data volumes to or from various storage array types in a storage area network (SAN) infrastructure including EMC Symmetrix™ and CLARiON® arrays, and other EMC designated third-party arrays*.

Applicability

Though storage replication provides the ability to perform a variety of volume transfers, this service covers only the following scenarios:

- Online pull, a live data full or incremental volume pull from one control to device to one remote device
- Online push, a live data full or incremental volume push from one control device to one remote device
- Offline pull, a full volume pull from one control device to one remote device
- Offline push, a full volume push from one control device to one or more remote devices
- Offline push, a point-in-time, incremental volume push of one TimeFinder®/Clone Target or Time/Snap Virtual Device (VDEV)[†] to one remote device

This service offering is applicable and currently limited to Symmetrix storage arrays capable of running Enginuity 5773 or 5874 microcode.

Service Positioning

Consider the following issues when positioning the *EMC Implementation for Open Replicator* service.

Accelerate Results

EMC implementation services help the customer to quickly realize the full range of benefits that Open Replicator can provide. EMC's documented service methodologies and tools enable EMC's experienced and highly trained project delivery teams to accelerate business results without straining the customer's resources, enabling them to accelerate time to value to achieve a higher return on their Open Replicator investment.

Reduce Risks

EMC implementation services reduce or eliminate the risks associated with reconfiguring the customer's environment by leveraging the experience and proven methodologies of the company that created the software and designed the solution. EMC service professionals undergo rigorous training and certification in storage technology and replication software implementation methodologies. EMC's global delivery model ensures consistent implementation quality anywhere in the world. The result is the right configuration for the customer's environment, based on their defined design specifications, and protection from data loss and hardware failures.

* A list of currently supported third-party arrays can be found on the Powerlink E-Lab™ Navigator.

† Cold push of a TimeFinder/Snap Virtual Device (VDEV) is supported on Enginuity 5874 and later only.
