Chapter 2 (Matrix Analysis):

Basic Ideas from Linear Algebra

P 2.1.1 (existence of a p rank factorization of A)

Assume A is $m \times n$ and of rank r . The using elementary elimination matrices we can reduce A to its row reduced echelon form R , given by $E_1 A = R$ or $A = E_1^{-1} R = E_2 R$. In this reduction E_2 is $m \times m$ and R is $m \times n$. Because R has $n - r$ zero rows we can block decompose it as follows

$$R = \begin{bmatrix} \hat{R}_{r \times n} \\ 0_{m-r \times n} \end{bmatrix}$$

where we have listed the dimensions of the the block matrices next to them. Now \hat{R} is of rank r . In addition, block decomposing E_2 as

$$E_2 = \begin{bmatrix} \hat{E}_{m \times r} & \hat{E}_{m \times m-r} \end{bmatrix}.$$

Now since E_2 is of rank m the first r columns of E_2 is a matrix of rank r . This block decomposition gives for A the expression

$$A = \begin{bmatrix} \hat{E} & \hat{E} \end{bmatrix} \begin{bmatrix} \hat{R} \\ 0 \end{bmatrix} = \hat{E} \hat{R}$$

This gives the decomposition of A into \hat{E} of size $m \times r$ and \hat{R} of size $r \times n$ each of rank r , thus proving the decomposition.

Numerical Methods in Computational Electrodynamics Ursula van Rienen, 2012-12-06 treated in more detail They are just specimen of larger classes of schemes Es sentially we have to distinguish between semi analytical methods discretiza tion methods and lumped circuit models The semi analytical methods and the discretization methods start directly from Maxwell s equations Semi analytical methods are concentrated on the analytical level They use a computer only to evaluate expressions and to solve resulting linear algebraic problems The best known semi analytical methods are the mode matching method which is described in subsection 2 1 the method of integral equations and the method of moments In the method of integral equations the given boundary value problem is transformed into an integral equation with the aid of a suitable Greens function In the method of moments which includes the mode matching method as a special case the solution function is represented by a linear combination of appropriately weighted basis func tions The treatment of complex geometrical structures is very difficult for these methods or only possible after geometric simplifications In the method of integral equations the Greens function has to satisfy the boundary condi tions In the mode matching method it must be possible to decompose the domain into subdomains in which the problem can be solved analytically thus allowing to find the basis functions Nevertheless there are some ap plications for which the semi analytic methods are the best suited solution methods For example an application from accelerator physics used the mode matching technique see subsection 5 4

Keast, Graeme Fairweather, 2012-12-06 This volume contains refereed papers and extended abstracts of papers presented at the NATO Advanced Research Workshop entitled Numerical Integration Recent Developments Software and Applications held at Dalhousie University Halifax Canada August 11 15 1986 The Workshop was attended by thirty six scientists from eleven NATO countries Thirteen invited lectures and twenty two contributed lectures were presented of which twenty five appear in full in this volume together with extended abstracts of the remaining ten It is more than ten years since the last workshop of this nature was held in Los Alamos in 1975 Many developments have occurred in quadrature in the intervening years and it seemed an opportune time to bring together again researchers in this area The development of QUADPACK by Piessens de Doncker Uberhuber and Kahaner has changed the focus of research in the area of one dimensional quadrature from the construction of new rules to an emphasis on reliable robust software There has been a dramatic growth in interest in the testing and evaluation of software stimulated by the work of Lyness and Kaganove Einarsson and Piessens The earlier research of Patterson into Kronrod extensions of Gauss rules followed by the work of Monegato and Piessens and Branders has greatly increased interest in Gauss based formulas for one dimensional integration **hp-Finite Element Methods for Singular Perturbations**

Jens M. Melenk, 2004-10-19 Many partial differential equations arising in practice are parameter dependent problems that are of singularly perturbed type Prominent examples include plate and shell models for small thickness in solid mechanics convection diffusion problems in fluid mechanics and equations arising in semi conductor device modelling Common features of these problems are layers and in the case of non smooth geometries corner singularities Mesh design principles for the efficient approximation of both features by the hp version of the finite element method hp FEM are proposed in this volume For a class of singularly perturbed problems on polygonal domains robust exponential convergence of the hp FEM based on these mesh design principles is established rigorously *NASA Conference Publication* ,1996
