Google Page Rank Report

Amy N. Langville, Carl D. Meyer

Google Page Rank Report:

Google's PageRank and Beyond Amy N. Langville, Carl D. Meyer, 2011-07-01 Why doesn't your home page appear on the first page of search results even when you query your own name? How do other web pages always appear at the top? What creates these powerful rankings? And how? The first book ever about the science of web page rankings, Google's PageRank and Beyond supplies the answers to these and other questions and more. The book serves two very different audiences: the curious science reader and the technical/computational reader. The chapters build in mathematical sophistication so that the first five are accessible to the general academic reader. While other chapters are much more mathematical in nature, each one contains something for both audiences. For example, the authors include entertaining asides such as how search engines make money and how the Great Firewall of China influences research. The book includes an extensive background chapter designed to help readers learn more about the mathematics of search engines and it contains several MATLAB codes and links to sample web data sets. The philosophy throughout is to encourage readers to experiment with the ideas and algorithms in the text. Any business seriously interested in improving its rankings in the major search engines can benefit from the clear examples, sample code, and list of resources provided. Many illustrative examples and entertaining asides. MATLAB code. Accessible and informal style. Complete and self-contained section for mathematics review. *Proceedings Of The 11th Joint International Computer Conference: Jicc 2005* Qingsheng Zhu, 2005-10-07 This book presents the latest techniques, algorithms, research accomplishments, and trend in computer science and engineering. It collects together 222 peer-reviewed papers presented at the 11th Joint International Computer Conference. The theme of this year is IT Intellectual Capital for the Betterment of Human Life. The articles in this book cover a wide range of active and interesting areas such as Digital Entertainment, Grid Computing, Embedded System, Web Service, and Knowledge Engineering. This book serves as a good reference not only for researchers but also for graduate students in corresponding fields. The proceedings have been selected for coverage in Index to Scientific Technical Proceedings, ISTP CDROM version, ISI Proceedings, CC Proceedings, Engineering Physical Sciences.
