Adams, Cameron McA. Gordon, Vaughan F.R. Jones, Louis H. Kauffman, Sofia Lambropoulou, Kenneth C. Millett, Jozef H. Przytycki, Renzo Ricca, Radmila Sazdanovic, 2019-06-26 This proceedings volume presents a diverse collection of high quality state of the art research and survey articles written by top experts in low dimensional topology and its applications The focal topics include the wide range of historical and contemporary invariants of knots and links and related topics such as three and four dimensional manifolds braids virtual knot theory quantum invariants braids skein modules and knot algebras link homology quandles and their homology hyperbolic knots and geometric structures of three dimensional manifolds the mechanism of topological surgery in physical processes knots in Nature in the sense of physical knots with applications to polymers DNA enzyme mechanisms and protein structure and function The contents is based on contributions presented at the International Conference on Knots Low Dimensional Topology and Applications Knots in Hellas 2016 which was held at the International Olympic Academy in Greece in July 2016 The goal of the international conference was to promote the exchange of methods and ideas across disciplines and generations from graduate students to senior researchers and to explore fundamental research problems in the broad fields of knot theory and low dimensional topology This book will benefit all researchers who wish to take their research in new directions to learn about new tools and methods and to discover relevant and recent literature for future study

Mirror Symmetry Kentaro Hori, 2003 This thorough and detailed exposition is the result of an intensive month long course on mirror symmetry sponsored by the Clay Mathematics Institute It develops mirror symmetry from both mathematical and physical perspectives with the aim of furthering interaction between the two fields The material will be particularly useful for mathematicians and physicists who wish to advance their understanding across both disciplines Mirror symmetry is a phenomenon arising in string theory in which two very different manifolds give rise to equivalent physics Such a correspondence has significant mathematical consequences the most familiar of which involves the enumeration of holomorphic curves inside complex manifolds by solving differential equations obtained from a mirror geometry The inclusion of D brane states in the equivalence has led to further conjectures involving calibrated submanifolds of the mirror pairs and new conjectural invariants of complex manifolds the Gopakumar Vafa invariants This book gives a single cohesive treatment of mirror symmetry Parts 1 and 2 develop the necessary mathematical and physical background from scratch The treatment is focused developing only the material most necessary for the task In Parts 3 and 4 the physical and mathematical proofs of mirror symmetry are given From the physics side this means demonstrating that two different physical theories give isomorphic physics Each physical theory can be described geometrically and thus mirror symmetry gives rise to a pairing of

geometries The proof involves applying  $R \rightarrow R^{\text{circle}}$  duality to the phases of the fields in the gauged linear sigma model The mathematics proof develops Gromov Witten theory in the algebraic setting beginning with the moduli spaces of curves and maps and uses localization techniques to show that certain hypergeometric functions encode the Gromov Witten invariants in genus zero as is predicted by mirror symmetry Part 5 is devoted to advanced topics This one of a kind book is suitable for graduate students and research mathematicians interested in mathematics and mathematical and theoretical physics
