

7.4 Homeostasis and Cells

Lesson Objectives

-  Explain how unicellular organisms maintain homeostasis.
-  Explain how multicellular organisms maintain homeostasis.

Lesson Summary

The Cell as an Organism Sometimes a single cell is an organism. Single-celled organisms must be able to carry out all the functions necessary for life.

- ▶ Unicellular organisms maintain **homeostasis**, relatively constant internal conditions, by growing, responding to the environment, transforming energy, and reproducing.
- ▶ Unicellular organisms include both prokaryotes and eukaryotes.
- ▶ Unicellular organisms play many important roles in their environments.

Multicellular Life Cells of multicellular organisms are interdependent and specialized.

- ▶ The cells of multicellular organisms become specialized for particular tasks and communicate with one another to maintain homeostasis.
- ▶ Specialized cells in multicellular organisms are organized into groups.
 - A **tissue** is a group of similar cells that performs a particular function.
 - An **organ** is a group of tissues working together to perform an essential task.
 - An **organ system** is a group of organs that work together to perform a specific function.
- ▶ The cells of multicellular organisms communicate with one another by means of chemical signals that are passed from one cell to another.
 - Certain cells form connections, or **cellular junctions**, to neighboring cells. Some of these junctions hold cells together firmly.
 - Other cells allow small molecules carrying chemical signals to pass directly from one cell to the next.
 - To respond to a chemical signal, a cell must have a **receptor** to which the signaling molecule can bind.

The Cell as an Organism

For Questions 1–5, complete each statement by writing the correct word or words.

1. The term _____ refers to the relatively constant internal physical and chemical state of a living cell.
2. Unicellular prokaryotes, called _____, are adapted to living in a remarkable number of different places.
3. Some unicellular eukaryotes, called _____, contain chloroplasts.
4. Yeasts are unicellular _____, which are eukaryotes.
5. Other unicellular eukaryotes include _____ and algae.
