**RUNX Proteins in Development and Cancer** Yoram Groner,Yoshiaki Ito,Paul Liu,James C. Neil,Nancy A. Speck,Andre van Wijnen,2017-03-15 This volume provides the reader with an overview of the diverse functions of the RUNX family of genes As highlighted in the introduction and several of the 29 chapters humans and other mammals have three RUNX genes that are known to play specific roles in blood bone and neuronal development However their evolutionary history has recently been traced back to unicellular organisms and their involvement in many well known signaling pathways Wnt TGFb Notch Hippo is indicative of a more general function in cell biology Their documented roles in cell fate decisions include control of proliferation differentiation survival senescence and autophagy The pleiotropic effects of RUNX in development are mirrored in cancer where RUNX genes can function as oncogenes that collaborate strongly with Myc family oncogenes or as tumour suppressor genes In the latter role they display hallmarks of both gatekeepers that modulate p53 responses and caretakers that protect the genome from DNA damage Several chapters focus on the importance of these genes in leukemia research where RUNX1 and CBFb are frequently affected by chromosomal translocations that generate fusion oncoproteins while recent studies suggest wider roles for RUNX modulation in solid cancers Moreover RUNX genes are intimately involved in the development and regulation of the immune system while emerging evidence suggests a role in innate immunity to infectious agents including HIV At the biochemical level the RUNX family can serve as activators or repressors of transcription and as stable mediators of epigenetic memory through mitosis Not surprisingly RUNX activity is controlled at multiple levels this includes miRNAs and a plethora of post

translational modifications Several chapters highlight the interplay between the three mammalian RUNX genes where cross talk and partial functional redundancies are evident Finally structural analysis of the RUNX CBFB interaction has led to the development of small molecule inhibitors that provide exciting new tools to decipher the roles of RUNX in development and as targets for therapy This volume provides a compendium and reference source that will be of broad interest to cancer researchers developmental biologists and immunologists *Exosomes as Therapeutic Systems* Robert Steven Conlan,Deyarina Gonzalez,Bruna Corradetti,Ines Mendes Pinto,2021-10-01 *Cell Biology and Translational Medicine, Volume 15* Kursad Turksen,2022-05-20 Much research has focused on the basic cellular and molecular biological aspects of stem cells Much of this research has been fueled by their potential for use in regenerative medicine applications which has in turn spurred growing numbers of translational and clinical studies However more work is needed if the potential is to be realized for improvement of the lives and well being of patients with numerous diseases and conditions This book series Cell Biology and Translational Medicine CBTMED as part of Springer Nature s longstanding and very successful Advances in Experimental Medicine and Biology book series has the goal to accelerate advances by timely information exchange Emerging areas of regenerative medicine and translational aspects of stem cells are covered in each volume Outstanding researchers are recruited to highlight developments and remaining challenges in both the basic research and clinical arenas This current book is the 15th volume of a continuing series *Forkhead FOXO Transcription Factors in Development and Disease* ,2018-02-07 Forkhead FOXO Transcription Factors in Development and Disease Volume 127 the latest release in the Current Topics in Developmental Biology series provides a comprehensive set of reviews on transcription factors FOXO and their various functions in health and disease Each chapter is contributed by a leading expert in the field with specific sections covering Exceptional Longevity Insights from Hydra to Humans FOXO in neural cells and diseases of the nervous system maintaining the equilibrium for better or for worse and The Role of FoxOs in Bone Health and Disease amongst other topics This compilation provides a unique up to date view of this enigmatic highly evolutionary conserved family of transcription factors with a diverse array of functions in aging and longevity cancer and metabolism Provides the authority and expertise of leading contributors Includes sections on the regulation of FOXO factors and stem cells Presents a unique view of this highly evolutionary family of transcription factors *Advanced Techniques for IoT Applications* Jyotsna Kumar Mandal,Debashis De,2021-08-02 This book includes original unpublished contributions presented at the Sixth International Conference on Emerging Applications of Information Technology EAIT 2020 held at the University of Kalyani Kalyani West Bengal India on November 2020 The book covers the topics such as image processing computer vision pattern recognition machine learning data mining big data and analytics information security and privacy wireless and sensor networks and IoT It will also include IoT application related papers in pattern recognition artificial intelligence expert systems natural language understanding image processing computer vision applications in biomedical engineering artificial neural networks

Zebrafish, Medaka, and Other Small Fishes Hiromi Hirata, Atsuo Iida, 2018-10-10 This book provides cutting edge studies and technologies using small fishes including zebrafish medaka and other fishes as new model animals for molecular biology developmental biology and medicine It also introduces eccentric fish models that are pioneering new frontiers of biology Zebrafish and medaka have been developed as lower vertebrate model organisms because these small fish are easy to raise in the laboratory and are useful for the live imaging of the morphology and activity of cells and tissues in intact animals By virtue of those specific advantages fish studies have demonstrated the common features of vertebrates and raised further questions toward understanding the mystery of life The book consists of four parts Development and Cell Biology Homeostasis and Reproduction Clinical Models and Eccentric Fish Together they describes the core area of small fish study often considered mere zoology but which is actually proving to be the universal basis of life Written by leading scientists the book helps readers to understand small fishes inspires scientists to utilize small fishes in their studies and encourages anyone who wants to participate in the large and fantastic world of small fish

A Girl's Education Judith Gill, Katharine Esson, Rosalina Yuen, 2016-07-10 This book argues that educators and the general public have become complacent about girls education as a consequence of the more recent fuss about problems for boys After an analysis of persistent disquiet about girls lifestyles it uses theories of gender and education to demonstrate that girls are being produced in contradictory ways in current schooling Many girls develop a sense of themselves through close connection with friendship groups but schooling processes typically require them to adopt the position of competitors in the end of school rankings and to act out their individualized positions in imagining themselves into the future Ultimately the work offers insight and understanding leading to a less divisive educational pathway for girls
