*Corporatizing American Health Care* Robert W. Derlet, 2021-02-02  
Tracking the evolution of medical care from an individualized small cottage profession to a giant impersonal corporate industry costing Americans over 3 trillion each year Over the past three decades the once efficient American health care system has evolved into a complex maze of monopolies and a racket of bureaucratic checks approvals denials roadblocks and detours This shift has created a massive and at times redundant workforce that frustrates patients as well as physicians nurses and administrative staff Health care costs the United States over 3 trillion each year and consumes over 18% of the country's gross domestic product That's more than 11 000 for each person in the country each year more than double what it costs in most Western European countries to deliver equal or even better care In *Corporatizing American Health Care* Robert W Derlet MD traces the progression of health care policy in the United States How he asks has US health care transformed from bedside medicine a model of small practices and patient focused care into corporate medicine which prioritizes profit and deals with both patient care and outcomes as billing codes Arguing that the US Congress is the root of the problem he describes how Congress has failed to enact legislation to prevent corporate monopolies in the health care industry Instead corrupted by large campaign donations and corporate lobbyists Congress has crafted loopholes benefiting corporations and harming people Drawing on his decades as a practicing physician caring for thousands of patients as well as his university and medical school teaching experience Derlet follows changes to both policy and practice across many sectors of health care Scrutinizing how hospitals work he also takes a hard look at high prescription drug prices unresponsive insurance companies problems with the Affordable Care Act the growing medical implant device industry and even nursing homes Finally he explains why the dominance of corporations and their lobbyists over health policy means that we now pay more for our care and our medications but have less choice both in what doctors we see and in what drugs we take Breaking down the complex

ABCs of health care to reveal the unscrupulous practices of the health care industry Corporatizing American Health Care is perfect for both students and general readers who want to understand the changes in our system from the perspective of an actual doctor

*Fibre Reinforced Concrete: From Design to Structural Applications* FIB – International Federation for Structural Concrete, 2020-08-01 The first international FRC workshop supported by RILEM and ACI was held in Bergamo Italy in 2004 At that time a lack of specific building codes and standards was identified as the main inhibitor to the application of this technology in engineering practice The workshop aim was placed on the identification of applications guidelines and research needs in order for this advanced technology to be transferred to professional practice The second international FRC workshop held in Montreal Canada in 2014 was the first ACI fib joint technical event Many of the objectives identified in 2004 had been achieved by various groups of researchers who shared a common interest in extending the application of FRC materials into the realm of structural engineering and design The aim of the workshop was to provide the State of the Art on the recent progress that had been made in term of specifications and actual applications for buildings underground structures and bridge projects worldwide The rapid development of codes the introduction of new materials and the growing interest of the construction industry suggested presenting this forum at closer intervals In this context the third international FRC workshop was held in Desenzano Italy four years after Montreal In this first ACI fib RILEM joint technical event the maturity gained through the recent technological developments and large scale applications were used to show the acceptability of the concrete design using various fibre compositions The growing interests of civil infrastructure owners in ultra high performance fibre reinforced concrete UHPFRC and synthetic fibres in structural applications bring new challenges in terms of concrete technology and design recommendations In such a short period of time we have witnessed the proliferation of the use of fibres as structural reinforcement in various applications such as industrial floors elevated slabs precast tunnel lining sections foundations as well as bridge decks We are now moving towards addressing many durability based design requirements by the use of fibres as well as the general serviceability based design However the possibility of having a residual tensile strength after cracking of the concrete matrix requires a new conceptual approach for a proper design of FRC structural elements With such a perspective in mind the aim of FRC2018 workshop was to provide the State of the Art on the recent progress in terms of specifications development actual applications and to expose users and researchers to the challenges in the design and construction of a wide variety of structural applications Considering that at the time of the first workshop in 2004 no structural codes were available on FRC we have to recognize the enormous work done by researchers all over the world who have presented at many FRC events and convinced code bodies to include FRC among the reliable alternatives for structural applications This will allow engineers to increasingly utilize FRC with confidence for designing safe and durable structures Many presentations also clearly showed that FRC is a promising material for efficient rehabilitation of existing infrastructure in a broad spectrum of repair applications These cases range

from sustained gravity loads to harsh environmental conditions and seismic applications which are some of the broadest ranges of applications in Civil Engineering The workshop was attended by researchers designers owner and government representatives as well as participants from the construction and fibre industries The presence of people with different expertise provided a unique opportunity to share knowledge and promote collaborative efforts These interactions are essential for the common goal of making better and sustainable constructions in the near future The workshop was attended by about 150 participants coming from 30 countries Researchers from all the continents participated in the workshop including 24 Ph D students who brought their enthusiasm in FRC structural applications For this reason the workshop Co chairs sincerely thank all the enterprises that sponsored this event They also extend their appreciation for the support provided by the industry over the last 30 years which allowed research centers to study FRC materials and their properties and develop applications to making its use more routine and accepted throughout the world Their important contribution has been essential for moving the knowledge base forward Finally we appreciate the enormous support received from all three sponsoring organizations of ACI fib and Rilem and look forward to paving the path for future collaborations in various areas of common interest so that the developmental work and implementation of new specifications and design procedures can be expedited internationally
