A Century of Mendelism in Human Genetics Milo Keynes, A. W. F. Edwards, Robert Peel, 2004-03-15 In 1901 William Bateson Professor of Biology at Cambridge published a renewed version of a lecture which he had delivered the year before to the Royal Horticultural Society in London reprinted in the book as an appendix In this lecture he recognized the importance of the work completed by Gregor Mendel in 1865 and brought it to the notice of Human Heredity and Society Val W. Woodward, 1992 **Heredity and Human Affairs** Edward Murray East, 1927 The Mysterious World of the Human Genome Frank Ryan, 2016-02-16 The human genome is indeed a mysterious world but as this fascinating book shows its vital secrets are now being uncovered The latest studies are revealing exciting new discoveries such as how the DNA and related chemical compounds in our cells work together to direct the processes of life Scientists are not only unraveling how life evolved in the ancient past but are also finding the keys to creating a healthier future How does the minuscule chemical cluster in each of our 100 trillion cells accomplish the amazing feat of creating and maintaining our bodies Frank Ryan a physician and an evolutionary biologist describes the complex ways in which the genome operates as a holistic system and not solely through genes coding for proteins the building blocks of life Also involved are elaborate switching mechanisms that regulate and control portions of our DNA as well as the interplay of retroviruses and bacteria This groundbreaking book explains that we are on the cusp of an amazing era of disease treatment and eradication **Genomes and What to Make of Them** Barry Barnes, John Dupré, 2009-05-15 The announcement in 2003 that the Human Genome Project had completed its map of the entire human genome was heralded as a stunning scientific breakthrough our first full picture of the basic building blocks of human life Since then boasts about the benefits and warnings of the dangers of genomics have remained front page news with everyone agreeing that genomics has the potential to radically alter life as we know it For the nonscientist the claims and counterclaims are dizzying what does it really mean to understand the genome Barry Barnes and John Dupr offer an answer to that question and much more in *Genomes and What to Make of Them* a clear and lively account of the genomic revolution and its promise The book opens with a brief history of the science of genetics and genomics from Mendel to Watson and Crick and all the way up to Craig Venter from there the authors delve into the use of genomics in determining evolutionary paths and what it can tell us for example about how far we really have come from our ape ancestors Barnes and Dupr then consider both the power and risks of genetics from the economic potential of plant genomes to overblown claims that certain human genes can be directly tied to such traits as intelligence or homosexuality Ultimately the authors argue we are now living with a new knowledge as powerful in its way as nuclear physics and the stark choices that face us between biological warfare and gene therapy a new eugenics or a new agricultural revolution will demand the full engagement of both scientists and citizens Written in straightforward language but without denying the complexity of the issues *Genomes and What to Make of Them* is both an up to date primer and a blueprint for the future The Answer

Out of Eden: The Peopling of the World Stephen Oppenheimer, 2012-03-01 In a brilliant synthesis of genetic archaeological linguistic and climatic data Oppenheimer challenges current thinking with his claim that there was only one successful migration out of Africa In 1988 Newsweek headlined the startling discovery that everyone alive on the earth today can trace their maternal DNA back to one woman who lived in Africa 150 000 years ago It was thought that modern humans populated the world through a series of migratory waves from their African homeland Now an even more radical view has emerged that the members of just one group are the ancestors of all non Africans now alive and that this group crossed the mouth of the Red Sea a mere 85 000 years ago It means that not only is every person on the planet descended from one African Eve but every non African is related to a more recent Eve from that original migratory group This is a revolutionary new theory about our origins that is both scholarly and entertaining a remarkable account of the kinship of all humans Further details of the findings in this book are presented at www.bradshawfoundation.com/stephenoppenheimer
