Car Wars John J. Fialka,2015-09-22 Drawing from the last decade of his

26 year career at the Wall Street Journal where he covered energy and environmental matters ClimateWire founder and industry insider John Fialka brings to life this thrilling and important story about American s rejection and second obsession with the electric car The resurgence of the electric car in modern life is a tale of adventurers men and women who bucked the complete dominance of the fossil fueled car to seek something cleaner simpler and cheaper Award winning former Wall Street Journal reporter John Fialka documents the early days of the electric car from the M I T Caltech race between prototypes in the summer of 1968 to the 1987 victory of the Sunraycer in the world s first race featuring solar powered cars Thirty years later the electric has captured the imagination and pocketbooks of American consumers Organizations like the U S Department of Energy and the state of California along with companies from the old guard of General Motors and Toyota as well as upstart young players like Tesla Motors and Elon Musk have embraced the once extinct technology The electric car has steadily gained traction in the U S and around the world We are watching the start of a trillion dollar worldwide race to see who will dominate one of the biggest commercial upheavals of the 21st century *Plug-In Electric Vehicles* David B. Sandalow,2009-09-01 Plug in electric vehicles are coming Major automakers plan to commercialize their first models soon while Israel and Denmark have ambitious plans to electrify large portions of their vehicle fleets No technology has greater potential to end the United States crippling dependence on oil which leaves the nation vulnerable to price shocks supply disruptions environmental degradation and national security threats including terrorism What does the future hold for this critical technology and what should the U S government do to promote it Hybrid vehicles now number more than one million

on America's roads and they are in high demand from consumers. The next major technological step is the plug-in electric vehicle. It combines an internal combustion engine and electric motor just as hybrids do. But unlike their precursors, PEVs can be recharged from standard electric outlets, meaning the vehicles would no longer be dependent on oil. Widespread growth in the use of PEVs would dramatically reduce oil dependence, cut driving costs, and reduce pollution from vehicles. National security would be enhanced as reduced oil dependence decreases the leverage and resources of petroleum exporters. Brookings fellow David Sandalow heads up an authoritative team of experts including former government officials, private sector analysts, academic experts, and nongovernmental advocates. Together they explain the current landscape for PEVs, the technology, the economics, and the implications for national security and the environment. They examine how the national interest could be served by federal promotion and investment in PEVs. For example, can tax or procurement policy advance the cause of PEVs? Should the public sector contribute to greater research and development? Should the government insist on PEVs to replenish its huge fleet of official vehicles? Plug-in electric vehicles are coming. But how soon, in what numbers, and to what effect? Feder

and Hybrid Cars Curtis D. Anderson, Judy Anderson, 2010-03-30. This illustrated history chronicles electric and hybrid cars from the late 19th century to today's fuel cell and plug-in automobiles. It describes the politics, technology, marketing strategies, and environmental issues that have impacted electric and hybrid cars research and development. Milestone projects and technologies such as early batteries, hydrogen, and bio-mass fuel cells, the upsurge of hybrid vehicles, and the various regulations and market forces that have shaped the industry are also covered.
