Social Issues in Living Color Arthur W. Blume,2017-02-16 Offering fresh and exciting approaches to solving global problems this book creatively views challenging social issues through the lens of racial and ethnic psychology As the

demographic makeup of the American population continues to evolve understanding and addressing the psychological needs of ethnic minorities in the United States becomes more important to the overall health and well being of society This three volume set is the first publication to explicitly tackle social issues from the perspective of racial and ethnic psychology It uniquely presents racial and ethnic psychological perspectives on topics such as media criminal justice racism climate change gender bias and health and mental health disparities Volume one introduces readers to the basic scientific concepts of racial and ethnic minority psychology and then examines the intersectionality of race ethnicity gender and sexual orientation It also addresses how race and ethnicity affect communication styles leadership styles and media The second volume discusses the experiences of individuals within racial and ethnic minorities including overt racism covert racism and colonialism and addresses how ethnic minority psychology plays a role in our educational system poverty global climate change and sustainability The third volume covers ethics in health and research considers the causes of health and mental health disparities and identifies diversity initiatives that can improve the health and well being of all citizens not just racial and ethnic minority citizens **The Publishers' Trade List Annual** ,1985 **Slope Stability and Erosion Control:**

Ecotechnological Solutions Joanne E. Norris,Alexia Stokes,Slobodan B. Mickovski,Erik Cammeraat,Rens van Beek,Bruce C. Nicoll,Alexis Achim,2008-02-29 This chapter describes the processes involved in the transport of material over hillslopes Hillslopes provide the gradients enabling material to be transported from the slopes themselves towards the valley bottoms directly by gravity alone or by water flowing down over the surface Gravity has the potential to transfer material downslope if the material resistance to contact it is insufficient Similarly water and wind flowing along the surface exert a drag on soil particles and have the potential to entrain material After the gradient has fallen below a critical threshold to keep the material in transport deposition occurs Conventionally slope processes in which gravity alone is the dominant transporting agent are called mass movements Brunsden 1984 Processes in which other agents dominate are called erosion e g wind or water erosion Flowing water is an important transporting agent on which the emphasis is placed here Although mass wasting is a natural process its incidence and impact may be exacerbated by human activities Crozier 1986 Morgan 2005 A situation may ultimately arise in which human interests become unsafe or unsustainable This impact is not only directly felt in the areas where material is removed or deposited and indirectly mass wasting may have an effect on soil and water quality in areas located further downstream In the following sections a brief overview is given of the mechanisms morphology causes and consequences of mass movements and erosion *Understanding Water in a Dry Environment* Ian Simmers,2003-01-01

In order to provide water security in the twenty first century there is universal agreement that a continuation of current policies and extrapolation of trends is not an option Also clear is that from both water supply and development perspectives the world's arid and semi arid regions are those currently and potentially experiencing the highest *Paperbound Books in Print* ,1992 Modeling Groundwater Flow and Contaminant Transport Jacob Bear,Alexander H.-D. Cheng,2010-01-18 In

many parts of the world groundwater resources are under increasing threat from growing demands wasteful use and contamination To face the challenge good planning and management practices are needed A key to the management of groundwater is the ability to model the movement of fluids and contaminants in the subsurface The purpose of this book is to construct conceptual and mathematical models that can provide the information required for making decisions associated with the management of groundwater resources and the remediation of contaminated aquifers The basic approach of this book is to accurately describe the underlying physics of groundwater flow and solute transport in heterogeneous porous media starting at the microscopic level and to rigorously derive their mathematical representation at the macroscopic levels The well posed macroscopic mathematical models are formulated for saturated single phase flow as well as for unsaturated and multiphase flow and for the transport of single and multiple chemical species Numerical models are presented and computer codes are reviewed as tools for solving the models The problem of seawater intrusion into coastal aquifers is examined and modeled The issues of uncertainty in model input data and output are addressed The book concludes with a chapter on the management of groundwater resources Although one of the main objectives of this book is to construct mathematical models the amount of mathematics required is kept minimal Handbook of Catchment Management Robert C. Ferrier, Alan Jenkins, 2009-09-11 This book addresses the fundamental requirement for an interdisciplinary catchment based approach to managing and protecting water resources that crucially includes an understanding of land use and its management In this approach the hydrological cycle links mountains to the sea and ecosystems in rivers groundwaters lakes wetlands estuaries and coasts forming an essential continuum directly influenced by human activity The book provides a synthesis of current and future thinking in catchment management and shows how the specific problems that arise in water use policy can be addressed within the context of an integrated approach to management The book is written for advanced students researchers fellow academics and water sector professionals such as planners and regulators The intention is to highlight examples and case studies that have resonance not only within natural sciences and engineering but with academics in other fields such as socio economics law and policy Publishers Directory , 1994
